

Pentland Powder Coating invest in the latest powder coating technology from Gema

OptiFlex®2 – Putting the wheels in motion on the road to success!

The quality of the finish has highest priority for Pentland Precision Engineering. To further enhance the aesthetic finishing quality they have recently invested in the latest OptiFlex®2 powder coating gun from Gema. The new equipment was a success from the very first moment.

Keywords:
OptiFlex 2, job coater, architecture

Established in 2002 and part of Pentland Precision Engineering Finishes Ltd, Pentland Powder coating offers a range of activities including sand-blasting, shot blasting, alloy wheel refurbishment, wet painting, silk screen painting, and of course powder coating to the highest standards, for wheels, frames, gates, railings, fabrications, plastics, steel and automotive.

To further enhance the aesthetic finish quality Pentland Powder Coatings have recently invested in a the latest generation OptiFlex®2 powder gun from

Gema, the world leaders in powder coating systems. With over 18 years experience in the powder coating industry Peter Renwick – Owner and Director of Pentland Powder Coating explained: «As the owner and decision maker at Pentland I keep a close eye on the costs. With raw material and utilities prices continuing to rise we are keen to reduce where possible our operating costs»

«At the forefront of our business we provide our customers premium quality finishes that represent extremely good value for money, quality underlines our

reputation and has been the key to our success since I founded the business back in 2002. In an increasingly competitive market we were not prepared to risk our reputation by turning to low cost – low quality powders. We had to turn to identifying operational improvements for the application process» «We have used Gema equipment for many years now and have had experience in various powder guns and manufacturers, Gema has always proven itself to be the best choice from both reliability and performance. It's thanks to Gema's new OptiFlex®2 powder coating gun we have been able to introduce a 30%

increase in our powder utilisation whilst enhancing the finish of our products, benefiting both our business and the customer.»

«We have over 20 standard colours, complimented with our custom powder range to meet our customers' requirements. The new OptiFlex®2 gun applies all powders at ease and is extremely easy to use, the number of sets of wheels we can now coat per box has increased significantly and we have seen further improvements in the finish quality when compared with the old OptiFlex gun» Explained Darren.

- 30% Increase in coverage per box of powder!
- Superior finish quality on all products using any powder!
- Outstanding performance and reliability!

OptiFlex®2

The OptiFlex®2 puts the world's most advanced manual powder coating technology in the palm of your hand. Spray all powders with ease, coat complex geometries with outstanding efficiency and quality and do it all in the most challenging environments – anywhere on the planet.

PENTLAND POWDER COATING

Pentland Powder Coating are extremely passionate about the quality of their workmanship and the whole powder-coating process. Pentland Powder coating can take on any job involving powder coating, sandblasting and wet painting. We are experts in all these areas and would welcome the opportunity to quote for any work you are looking to have done.
