General safety regulations

This chapter sets out the fundamental safety regulations that must be followed by the user and third parties using the OptiStar CG09 Gun control unit.

These safety regulations must be read and understood before the OptiStar CG09 Gun control unit is put into operation.

Safety symbols (pictograms)

The following warnings with their meanings can be found in the Gema Switzerland operating instructions. The general safety precautions must also be followed as well as the regulations in the operating instructions.

DANGER!
Danger due to electrically live or moving parts. Possible consequences: death or serious injury

WARNING!
Improper use of the equipment could damage the machine or cause it to malfunction. Possible consequences: minor injuries or damage to equipment

INFORMATION!
Useful tips and other information

Proper use

1. The OptiStar CG09 is built to the latest specification and conforms to the recognized technical safety regulations and is designed for the normal application of powder coating.

2. Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. Gema Switzerland GmbH must be consulted prior to any use of the OptiStar CG09 for any purposes or substances other than those indicated in our guidelines.
3. Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use. The OptiStar CG09 should only be used, maintained and started up by trained personnel, who are informed about and are familiar with the possible hazards involved.

4. Start-up (i.e. the execution of intended operational tasks) is forbidden until it has been established that the OptiStar CG09 has been set up and wired according to the guidelines for machinery (2006/42 EC). EN 60204-1 (machine safety) must also be observed.

5. Unauthorized modifications to the OptiStar CG09 exempt the manufacturer from any liability from resulting damage.

6. The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

7. Furthermore, the country-specific safety regulations also must be observed.

---

**Product-specific safety measures**

- Installation work performed by the customer must be carried out according to local regulations.
- All components must be grounded according to the local regulations before start-up.

**OptiStar CG09 Gun control unit**

The OptiStar CG09 Gun control unit is a constituent part of the equipment and is therefore integrated in the system's safety concept.

If it is to be used in a manner outside the scope of the safety concept, then corresponding measures must be taken.

---

**NOTE:**

For further security information, see the more detailed Gema safety regulations!
About this manual

General information

This operating manual contains all the important information you require for the working with the OptiStar CG09 Gun control unit. It will safely guide you through the start-up process and give you references and tips for the optimal use of your new powder coating system.

Information about the functional mode of the individual system components - booth, gun and powder injector - should be referenced in the respective enclosed documents.

**DANGER:**

**Working without operating instructions**

Working without operating instructions or with individual pages from the operating instructions may result in damage to property and personal injury if relevant safety information is not observed.

► Before working with the device, organize the required documents and read the section "Safety regulations".
► Work should only be carried out in accordance with the instructions of the relevant documents.
► Always work with the complete original document.

Software version

This document describes the operation of the OptiStar CG09 Gun control unit with software version starting from 1.06 (see also "Software version request")!
Product description

Field of application

The OptiStar CG09 Gun control unit is designed exclusively for controlling the Gema powder coating guns (see also in chapter "Technical data").

Any other use is considered non-compliant. The manufacturer is not responsible for any incorrect use and the risks associated with such actions are assumed by the user alone!

For a better understanding of the interrelationships in powder coating, it is recommended that the operating instructions for all other components be read as well, so as to be familiar with their functions too!

Reasonably foreseeable misuse

- Operation without the proper training
- Use with insufficient compressed air quality and grounding
- Use in connection with unauthorized coating devices or components

<tr>
<td>- OptiFlex F (without AirMover air requirements)</td>
<td>0-5.0 Nm³/h</td>
<td>1.0 Nm³/h</td>
</tr>
<tr>
<td>- OptiFlex S (with optional fluid plate)</td>
<td>0-1.0 Nm³/h</td>
<td>0.1 Nm³/h</td>
</tr>
<tr>
<td>Electrode rinsing air flow rate</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>0-5.0 Nm³/h</td>
<td>0.1 Nm³/h</td>
</tr>
<tr>
<td>Flow rate total air (at 5.5 bar)</td>
<td>5 Nm³/h</td>
<td></td>
</tr>
<tr>
<td>- Conveying air flow rate</td>
<td>0-5.4 Nm³/h</td>
<td></td>
</tr>
<tr>
<td>- Supplementary air flow rate</td>
<td>0-4.5 Nm³/h</td>
<td></td>
</tr>
</tbody>
</table>

NOTE:
The total air consumption for the device is determined based on the 3 configured air values (without AirMover air value for OptiFlex F).
These values apply for an internal control pressure of 5.5 bar!

NOTE:
The max. total air consumption during the coating operation is < 5.5 Nm³/h:
► Total air = 5 Nm³/h (Conveying air + Supplementary air)
► Electrode rinsing air = 0.1 Nm³/h (flat jet nozzle)

Compatibility and interactions

The OptiStar CG09 gun control unit is used for the following manual equipment from the OptiFlex line:
- OptiFlex B/Q (with powder box)
- OptiFlex F (with fluidized powder hopper)
- OptiFlex S (with stirrer container)
- OptiFlex C (with application cup)
- OptiFlex L (with lab device)
- OptiFlex W, K (Kits)
- OptiFlex Dual Gun Kit B, F
- OptiFlex Dual Gun Wall Kit B, F
Design and function

Scope of delivery
- Mains cable
- Quick start instructions and operating manual
Typical properties – Characteristics of the functions

Operating modes
The OptiStar CG09 gun control unit has two operating modes.

**Predefined operating mode (Preset mode)**
The OptiStar CG09 gun control unit has three preset application modes:

- **Application mode for flat parts**
  This application mode is suitable for the coating of simple, flat workpieces without larger cavities.

- **Application mode for complex parts**
  This application mode is suitable for the coating of three-dimensional workpieces with complex shapes (e.g. profiles).

- **Application mode for recoating parts already coated**
  This application mode is suitable for the overcoating of workpieces which are already coated.

In this operating modes, current (µA) and high voltage (kV) are preset, while powder and air volumes can be set and stored for each application mode.
Adjustable operating mode (Program mode)

In this operating mode, 20 individually definable programs (P01-P20) are available. These programs are automatically saved and can be recalled again as the application requires.

The values for current, high voltage, powder output, total air and electrode rinsing air can be set as needed for a given application.

**NOTE:**
The settings defined in the 20 programs and 3 application modes are automatically stored, without confirmation!

Precise Control of spraying Current (PCC Mode)

For coating components with both complex and simple geometries, a spraying current of below 10 µA can be selected to prevent unintended overcoating on the simpler surfaces. This is especially important in combination with high loading powders (such as metallic). The controller automatically switches into “PCC mode”. **This allows for very fast yet highly precise control.** The high voltage and spray current values and their symbols are depicted in red:
Rinsing mode

The PowerClean mode is used to blow powder accumulations and moisture out of the powder hose, injector, and gun using compressed air.

The device provides three rinsing modes:

- simple rinsing mode (without optional PowerClean module)
- PowerClean™ mod (with optional PowerClean module)
- rinsing mode for OptiFlex 2 Q equipment

The desired rinsing mode must be set in the system parameter P01 (see "Entering the system parameters").

NOTE:
The rinsing mode can only be activated from standby mode, namely by pressing the P key on the gun remote control or the corresponding keys on the gun control unit.

The rinsing mode is signaled by a circling LCD segment on the display:

The actual rinsing procedure is started and stopped by pressing the gun trigger. Once the rinsing mode is quit, the unit automatically returns to the last program.

Remote control by gun

NOTE:
The remote control is blocked as long as the keyboard lock is activated or while in system parameterization mode.

Various functions can be remotely controlled using the buttons on the rear side of the powder gun (OptiSelect GM03 gun type):

- Modify the powder output (press the Λ or Ω key on the gun) The powder output will be increased or decreased accordingly
- Change programs (press the Λ or Ω key on the gun) It is switching between programs P01-P20. This function must be activated first, in order to use it - see "Activate/deactivate the program change via remote control".

NOTE:
Pressing one of the keys calls up the desired values instead of the actual values!

- Switch to PowerClean mode (Press P button). Only if system parameter P01 = 1
Monitoring of wearing parts

Wearing parts have a limited service life. The OptiStar CG09 gun control unit offers functionality to monitor the service life of up to four wearing parts using a reverse counter:

NOTE:
The order of wearing parts to be monitored as well as the service life can be set as needed by the operator.

Example table:

<table>
<thead>
<tr>
<th>No.</th>
<th>Wearing part</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Insert sleeve</td>
</tr>
<tr>
<td>2</td>
<td>Powder hose</td>
</tr>
<tr>
<td>3</td>
<td>Electrode holder</td>
</tr>
<tr>
<td>4</td>
<td>Pulverizing element</td>
</tr>
</tbody>
</table>

To better explain this function, a few terms relevant to this process must first be explained:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service life</td>
<td>Operating time after which wearing parts should be replaced (defined by the operator).</td>
</tr>
<tr>
<td>Minus days</td>
<td>Number of hours past the selected service life that the wearing part has continued to be used.</td>
</tr>
<tr>
<td>Operating life</td>
<td>Effective time during which the wearing part was in operation = service life plus minus days, if any</td>
</tr>
<tr>
<td>Remaining service life</td>
<td>Displayed value (where not in the minus range)</td>
</tr>
</tbody>
</table>

- The service life monitoring can be activated/deactivated for each wearing part (see also "Initial start-up - Monitoring of wearing parts")
- By default all monitoring is deactivated and must be activated by the operator
- Query the remaining service life
- Reset the operating time
- Unit used for display of service life / operating time: 1 day (x.x), range: 0.1 – 500 days
Keyboard lock

The OptiStar CG09 gun control unit has a keyboard lock to prevent modification of individual parameter values (kV, µA etc.) within the operating modes (Program and Preset). Following is not affected by the keyboard lock:

- Program selection
- Display of desired values of the current program
- Displaying the actual values
- Error acknowledgement

An active keyboard lock is indicated by a blinking of the remote display. (see also "Initial start-up - Activate/deactivate the keyboard lock")

The keyboard lock status remains stored, when switching the equipment off and on. The keyboard lock is cancelled if a RAM reset is performed.

Background illumination

**Brightness**

8 different brightness settings are available for the display. The setting remains in place when the machine is switched on/off.

**Auto Power Save mode**

The background illumination is reduced automatically if the control unit is inactive for 5 minutes.

**Correction factor for the powder output**

The OptiStar CG09 gun control unit enables a zeroing out of the powder output. This allows for compensation to different powder hose lengths connecting to the pistol.
The correction factor $C_0$ can be selected such that no powder is output when the powder share is reduced to 0%. (see also "Initial start-up - Setting correction factor for powder output")

**Operation and configuration of the Tribo gun**

The Tribo gun can be connected to the OptiStar CG09 manual gun control unit. The Tribo gun can be configured by holding the keys T5 and T6 when switching on. The selected adjustment remains stored, when the device is switched off. The settings are also retained if the device type is changed. The Tribo pistol mode can also be deactivated using the procedure mentioned above.

The charging current ($\mu$A) is displayed in the main menu during coating process:
Commissioning

Preparation for start-up

Basic conditions
When starting up the OptiStar CG09 gun control unit, the following general conditions impacting the coating results must be taken into consideration:

- Gun control unit correctly connected
- Gun correctly connected
- Corresponding power and compressed air supply available
- Powder preparation and powder quality

Mounting instructions
The OptiStar CG09 gun control unit is mounted into place using 2xM6 screws on the front side.
Connection instructions

**NOTE:**
Use clamp to connect grounding cable to the cabin or the suspension arrangement. Check ground connections with Ohm meter and ensure 1 MOhm or less!
NOTE:
The compressed air must be free of oil and water!

NOTE:
If no vibration motor (OptiFlex B) is connected, close the 2.2 Aux output with the provided dust protection cap!
If no PowerClean module is connected, close also the 2.4 Purge connection with the provided dust protection cap!
Initial start-up

NOTE:
The gun control unit always starts up to the last configured settings.

System parameters

The OptiStar CG09 Gun control unit is configured by using the system parameters. This configuration will be saved in the equipment memory.

Entering the system parameters

1. Turn on the gun control unit with the ON key

2. Hold key down for 5 seconds
   The display switches to the following level:

3. The system parameter number is shown in the display A1 with a P placed in front

4. Set the corresponding system parameter value with the T5 or T6 key.
   The value of the adjusted system parameter appears on corresponding display A3

5. Browse to the next or previous system parameter with the T1 or T2 key

6. Select parameter values according to the following table
**NOTE:**
The system parameter P00 of the manual unit may not be set to 3 (automatic device)!
A wrong parameterization leads to various malfunctions!

<table>
<thead>
<tr>
<th>No.</th>
<th>Description</th>
<th>Values</th>

<td></td>
</tr>
</tbody>
</table>

1) is not overwritten, if a Memory Reset is performed
2) Not available for manual units
Default values are marked by **bold** print.

7. Press key to quit the system parameter mode
The display switches to the standard level
System parameter P00 (device type)

NOTE:
If the control unit is supplied as a component of an OptiFlex 2 complete unit, then the corresponding system parameter is set correctly by the factory!

NOTE:
A wrong parameterization leads to various malfunctions!

The system parameter P00 must be set to 0, 1, 2, or 4!

Manual devices are subdivided into fluidizing, box or stirrer types. These sub-types differ in the control of the vibrator output and the behavior of the fluidizing air.

<table>
<thead>

</table>
**System parameter P01 (rinsing mode)**

The system parameter P01 is set to 0 when device is starting.

<table>
<thead>
<tr>
<th>P01 parameter value</th>
<th>Description</th>
</tr>
</thead>
</table>
| 0                   | Manual equipment without PowerClean module:  
|                     | P key on the gun switches from the remote control of powder output to the remote control of program change! The simple rinsing mode cannot be activated directly on the gun. |
| 1                   | Manual equipment with PowerClean module:  
|                     | The rinsing mode is started by pressing the P key on the gun, and the rinsing procedure is started by pressing the gun trigger. |
| 2                   | OptiFlex 2 Q equipment:  
|                     | The rinsing mode and the rinsing procedure are started immediately after pressing the P key or the external push button (without pressing the gun trigger). |

**System parameter P03 (measuring unit)**

This parameter is used to determine the measuring unit for all airs (total air and electrode rinsing air). If the parameter is set to 1 (scfm), then all air values are shown in this measuring unit. These lines are displayed in blue.
System parameter P10 (Log messages)

The device can export log reports of the program run to an SD card for test purposes and for finding defects.

If an SD card is inserted during the switching on procedure, the log messages are also recorded onto the SD card. The data are record in the MESSAGES.LOG file in the root directory. Once this file reaches a size of 32 MB, it is renamed as MESSAGES.1 and a new MESSAGES.LOG file is then created.

<table>
<thead>
<tr>
<th>P10 parameter value</th>
<th>Level of detail of reports</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>no messages</td>
</tr>
<tr>
<td>1</td>
<td>few details</td>
</tr>
<tr>
<td>...</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>all messages</td>
</tr>
</tbody>
</table>

NOTE:
Real time timings can be impaired from a level of detail of 4.
NOTE:
During the initial commissioning of the device, it is recommended that the functional check be performed without powder!

Select predefined operating mode (Preset mode)

1. Turn on the gun control unit with the ON key
2. Press the corresponding application key
   the arrow above the pressed key is switched on

The pre-defined application modes have preset values for high voltage and spray current:

<table>
<thead>
<tr>
<th>Application mode</th>
<th>Preset µA</th>
<th>Preset kV</th>
</tr>
</thead>
<tbody>
<tr>
<td>(flat parts)</td>
<td>100</td>
<td>100</td>
</tr>
<tr>
<td>(complex parts)</td>
<td>22</td>
<td>100</td>
</tr>
<tr>
<td>(overcoated)</td>
<td>10</td>
<td>100</td>
</tr>
</tbody>
</table>

3. The air values for total air, powder output and electrode rinsing air can be individually defined and are saved in the programs.

Starting the user-defined operating mode (Program mode)

1. Turn on the gun control unit with the ON key
2. Press program key
3. Select desired program (01-20)
4. Change coating parameters as required

NOTE:
Programs 01-20 are automatically saved.
### Description and Presetting

<table>

</tr>
<tr>
<td>Fluidizing air</td>
<td>1.0 Nm³/h (for OptiFlex-F)</td>
</tr>
<tr>
<td></td>
<td>0.1 Nm³/h (for OptiFlex-B and S)</td>
</tr>
</tbody>
</table>

### Setting Powder Output and Powder Cloud

The powder output depends on the selected powder output (in %) and the selected total air volume.

**Setting the Total Air Volume**

1. Adjust the total air volume with the T3/T4 keys (see also the gun / injector operating manual)
   - Adjust the total air volume according to the corresponding coating requests

**Setting the Powder Output**

1. Adjust the powder output volume (e.g. according to the desired coating thickness)
   - Factory default setting of 50% is recommended for initial operation. The total air volume is thereby kept constant automatically by the control unit.

**NOTE:**

As a factory default value, a powder rate of 50% and a total air volume of 4 Nm³/h are recommended.

If values are entered that the equipment cannot implement, then the operator is informed of this by a blinking in the relevant display and a temporary error message!

2. Check fluidization of the powder in the powder container
3. Point the gun into the booth, press the gun trigger and visually check the powder output
Setting the electrode rinsing air

1. Press the key T9 (SELECT) The second display level will be shown

2. Adjust the correct electrode rinsing air according to the applied nozzles (deflector plate, flat jet nozzle)

**NOTE:**
By using flat jet nozzles, the factory default value is approx. 0.3 Nm³/h, by using round jet nozzles with air-rinsed deflector plates, the factory default value is approx. 0.5 Nm³/h!

3. If in this display level is no operation for 3 seconds, the first display level is switched over independently

Setting the fluidization

The fluidizing can be adjusted on the OptiFlex 2 B, OptiFlex 2 F and OptiFlex 2 S manual device.

The powder fluidization depends on the powder type, the air humidity and the ambient temperature. Fluidizing and vibration start by switching on the control unit.

**Procedure:**

1. Configure AirMover by opening the ball valve complete and adjusting with the flow control valve (OptiFlex 2 F only)
2. Open the powder container cover
3. Press the key T9 (SELECT) The second display level will be shown
4. Adjust the fluidizing air with the keys T5/T6
   - If in this display level is no operation for 3 seconds, the device switches back to the first display level
   - The powder should only be touched gently, but should be “cooked” regularly and is also to be stirred using a rod
5. Close again the cover
Setting correction factor for powder output

Entering the correction factor

1. Hold \( \text{(key down) for 5 seconds} \)
   The display switches to the following level:

2. Press \( \text{(key) \n   The display switches to the following level:} \)

3. The value of the correction factor \( C_0 \) is displayed

4. Set the corresponding correction value with the \( \text{T3 or T4 key.} \)
   The value of the adjusted correction factor appears on corresponding display \( A_2 \)

5. Select correction value according to the following table

<table>
<thead>
<tr>
<th>Corr.-value</th>
<th>Description</th>
<th>Range(^2)</th>
<th>Default value</th>
</tr>
</thead>
<tbody>
<tr>
<td>( C_0 )</td>
<td>Powder output (dm(^3)/h)</td>
<td>0.5-3.0</td>
<td>1.0(^{1)}</td>
</tr>
</tbody>
</table>

1) The correction value is set to its default value if the default value changes when the P00 device type is changed.

2) The correction value is set to its default value if it is outside of the value range after the P00 device type has been changed.
Rinsing mode

The rinsing mode enables blowing off powder accumulations in the powder hose with preset air pressure. This function is a two steps process to activate.

Activating the rinsing function

Manual equipment without PowerClean module (system parameter P01=0)

The rinsing mode can only be activated from standby mode (main menu display, no powder conveying).

NOTE:
The injector must be detached prior to rinsing procedure!

1. Detach the injector
2. Press these two keys at the same time for 3 seconds
### Procedure Effect

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Effect</th>
</tr>
</thead>
</table>
| **automatic** | - The automatic rinsing process is started  
- Injector, powder hose, gun and spray nozzle are purged using compressed air  
- The automated PowerClean function enables parallel cleaning of other components, such as the fluid intake unit, powder container, etc. |
| **manual** | - The operator controls the number and length of the PowerClean impulse by pressing the pistol trigger a second time |

The rinsing mode is exited:
- if the automatic rinsing sequence has finished  
- if no operation is started within 15 s

The active manual rinsing function is terminated immediately when exiting this mode.

The rinsing mode can be terminated with the same key combination, if required.

After completion of the PowerClean procedure, the controller switches back to coating mode.

**Manual equipment with optional PowerClean module (system parameter P01=1)**

The rinsing mode can only be activated from standby mode (main menu display, no powder conveying).
**Initial start-up OptiStar CG09**

<table>
<thead>
<tr>
<th>Procedure</th>

- if no operation is started within 15 s

The active manual rinsing function is terminated immediately when exiting this mode.

The rinsing mode can be terminated with the same key combination, if required.

After completion of the PowerClean procedure, the controller switches back to coating mode.

**Monitoring of wearing parts and trigger counter**

1. Press key 2x  
The display switches to the following level:

2. Press and at same time  
Monitoring is activated  
During the first activation a value of 0.1 is shown as the start value. If monitoring has already been activated at some earlier point, then the last stored value is displayed.

3. Set the desired service life for each wearing part using the or  

4. The reverse counter is then activated and runs only during active coating
5. If the selected service life is exceeded, the **service** symbol appears on the display. The coating procedure is not affected by this.

**Trigger counter**

The trigger counter (total time in days of trigger time) is shown in the display A5.

The trigger counter can't be reset!

**View remaining service life**

1. Press **key 2x**
   The display switches to the wearing part monitoring level

   Display example for wearing part no. 3:

<table>
<thead>
<tr>
<th>Display of remaining service life: range 0.1 – 500 days</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; or &gt; adjustment of service life</td>
</tr>
<tr>
<td>&lt; and &gt; Deactivation of monitoring</td>
</tr>
<tr>
<td>&lt; and &gt; Activation of monitoring</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Monitoring deactivated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quit wearing parts monitoring</td>
</tr>
<tr>
<td>Service life expired negative value: display blinks</td>
</tr>
</tbody>
</table>

   **Table:**

<table>
<thead>
<tr>
<th>Read minus days</th>
<th>-7.5 days</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selected service life</td>
<td>200 days</td>
</tr>
<tr>
<td>Operating life</td>
<td>207.5 days</td>
</tr>
</tbody>
</table>
Deactivation of wearing part monitoring

1. Press \(<\) and \(>\) key simultaneously
   Monitoring is deactivated.

Setting the background illumination

1. Press \(sel\) key
   The display switches to the following level:

2. Select the desired brightness
Activate/deactivate the program change via remote control

The remote control function has been set in the factory to change the powder output. If the operator prefers the possibility to switch between the programs P01-P20, this function is to be activated/deactivated on the control unit as follows:

1. Hold key pressed
2. Press key
   The display flashes once, and the program change function is activated/deactivated

NOTE:
This function can only be activated/deactivated by pressing the P key on the gun remote control, if the system parameter P01=0.

Activate/deactivate the keyboard lock

1. Hold key pressed
2. Press key
   The keyboard lock is activated. The remote display blinks.
3. The keyboard lock is cancelled by pressing the same key combination

Checking the software version

1. Press these two keys at the same time
2. The status display is shown as long as the keys are held.
RAM Reset

The RAM reset enables a restore of factory settings of the OptiStar CG09 gun control unit. All parameters (except P00) and correction values as well as all user-defined values in the Program mode and Preset mode will be overwritten with factory default. An active keyboard lock will be deactivated.

NOTE:
By resetting the RAM, all user-made settings will be set to factory default!

1. Switch off the control unit
2. Press the \( \text{on} \) key and hold it
3. Switch on the control unit, the CLR display blinks
4. Wait for approximately 5 seconds, until CLR disappears
5. Release the \( \text{on} \) key
6. All values are reset. The control unit must be set-up again.

Shutdown

1. Release gun trigger
2. Switch off the control unit

NOTE:
The adjustments for high voltage, powder output volume and electrode rinsing air remain stored

If in disuse for several days

1. Separate from power mains
2. Clean the coating equipment (see the corresponding operating manual)
3. Turn off the compressed air main supply
Fault remedying

Error diagnosis of the software

General information

The correct function of the OptiStar CG09 Gun control unit is constantly monitored. If the equipment software determines a fault, an error message is indicated with a help code. Following is monitored:

- High voltage technology
- Pneumatic system
- Power supply

Help codes

The error diagnosis codes (help codes) are shown in rot on the A5 display.

The help codes are stored in an error list in the order of their appearance. Each error in the list must be individually acknowledged with the keys T10 or T11.

The errors are displayed in the order of their appearance. The T10 and T11 keys cannot be used for other functions, as long as an error code is still shown.

Here is a list of all possible help codes for the OptiStar CG09 Gun control unit:

**Help codes list**

The last appeared four errors are stored in a list by the software. If an error appears, which is already in the list, he will not be listed again.

**Appearance of errors**

It is possible that an error is only displayed for a short time, but after the acknowledgement it will disappear. In this case, it's recommended to switch off the control unit and switch it on again (reset by restarting).
Spare parts list

Ordering spare parts

When ordering spare parts for powder coating equipment, please indicate the following specifications:

- Type and serial number of your powder coating equipment
- Order number, quantity and description of each spare part

Example:

- **Type** OptiStar CG09
  **Serial number** 1234 5678
- Order no. 203 386, 1 piece, Clamp - Ø 18/15 mm

When ordering cable or hose material, the required length must also be given. The spare part numbers of this bulk stock is always marked with an *.

Wearing parts are always marked with a #.

All dimensions of plastic hoses are specified with the external and internal diameter:

Example:

Ø 8/6 mm, 8 mm outside diameter (o/d) / 6 mm inside diameter (i/d)

**WARNING!**

Only original Gema spare parts should be used, because the explosion protection will also be preserved that way. The use of spare parts from other manufacturers will invalidate the Gema guarantee conditions!
