DIRECTIONS FOR USE

Electrostatic Manual spraying equipment for Coating powder

consists of:
- EasySelect-E Electrostatic Manual Spray Gun
- EasyTronic Control unit
- 50 l fluidized powder hopper

This equipment is matched and should only be operated in this configuration.

Safety rules for electrostatic Powder coating

1. This equipment can be dangerous when not operated according to the following standards:
   EN 50 050 (or VDE 0745 Part 100),
   EN 50 053 Part 2 (or VDE 0745 Part 102),
   and specification sheet, ZH 1/443 Electrostatic Powder Coating.
2. All electrically conductive parts, within 5 m of the coating area, especially the workpieces, must be grounded.
3. The floor in the coating area must be electrostatically conductive (normal concrete is generally conductive).
4. The operating personnel must wear electrostatically conductive footwear (i.e. leather soles).
5. The operating personnel should hold the powder gun in the bare hand. If gloves are worn they must be electrostatically conductive.
6. Connect the grounding cable (green/yellow) supplied to the grounding screw of the electrostatic manual powder coating equipment. The grounding cable must have a good metal to metal connection with the powder coating booth, the powder recovery equipment and the chain conveyor or the hangers of the objects.
7. The electrical cables and powder hose to the guns must be laid out so that they are protected from possible mechanical damage.
8. The powder coating equipment must switch on only after the powder booth is in operation. If the booth breaks down, then the powder coating equipment must switch off.
9. The grounding of all conductive parts is to be checked at least once a week.
10. When cleaning the powder gun and when replacing nozzles the control unit must be switched off.

**Electrical data**

- Input voltage: 85 – 264 VAC
- Frequency: 50/60 Hz
- Connected load: 65 VA 130 VA
- Rated output voltage (to powder gun): max. 12 V_s
- Rated output current (to powder gun): max. 1 A
- Type of protection: IP 54
- Temperature range: 10 °C to +40 °C (+50 °F to 104 °F)
- Approval: 

**Pneumatic data**

- Main compressed air input: G 1/4" (Female)
- Max. Input pressure: 10 bar
- Min. Input pressure: 6 bar
- Max. Water vapour content of the compressed air: 1.3 g/m³
- Max. Oil vapour content of the compressed air: 0.1 mg/kg (Oil/Water)
- Max. Compressed air consumption
  - Powder hose - ø 11 mm: 8 m³/h 15 m³/h

**Dimensions**

- Width: 608 mm 692 mm
- Depth: 823 mm 823 mm
- Height: 1195 mm 1195 mm
- Weight: 42 kg 51 kg
- Volume: 50 l (approx. 25 kg) 50 l (approx. 25 kg)

---

The Easy 1-FE / Easy 2-FE Manual coating equipment can only be used with the EasySelect-E Manual Powder Gun!
ABOUT THESE OPERATING INSTRUCTIONS

These operating instructions contain all the important information which is required to operate the EASY powder coating equipment. It will guide you safely through the installation stage, give you information to convert your EASY 1 system to an EASY 2 system, also notes and tips for the optimum use of your new powder coating system. The information about the functioning of the individual system components - EasyTronic powder gun control, EasySelect-E Manual powder gun or EI1-V powder injector will be found in the respective accompanying documentation.
EASY 1-FE / EASY 2-FE ELECTROSTATIC POWDER MANUAL EQUIPMENT

1. Field of Application

The EASY 1-FE / EASY 2-FE Electrostatic Powder Manual equipment with the EasySelect-E Manual powder gun is ideally suited for manual coating of objects in small series with not inflammable Enamel-powder.

2. Scope of delivery for EASY 1-FE (Standard)

An EasyTronic control unit (1) in a metal housing with a Mains connection cable.

A mobile trolley (10) with a shelf (13) and a holder (14) for guns and hoses.

A powder hopper (6) with cover and venting tube with ball valve (11).

A pressure reducing valve for the fluidizing air (9), mounted on the trolley.

A plug-in EI1-V injector (4)

An EasySelect-E Manual powder gun (2) with electric cable, powder hose, rinsing air hose and standard nozzle set (see EasySelect-E Manual powder gun operating instructions).

Pneumatic hoses (3) for conveying air (red), supplementary air (black), and pneumatic hose for fluidizing air (black).

3. Supplementary material for EASY 2-FE (Standard)

- An EasyTronic control unit, control unit housing, complete with gun holder, special Mains connecting cable and connecting material
- A plug-in EI1-V injector, a suction tube, lock nut, and a pneumatic kit
- An EasySelect-E Manual powder gun with electric cable, powder hose, rinsing air hose and standard nozzle set
- Pneumatic hoses for conveying air (red), supplementary air (black), and a pneumatic connection with a double air connection adapter from the pressure reducing valve to the control unit.
CONNECTION INSTRUCTIONS

The Manual Powder equipment is partially assembled in the factory. Only certain cables and hoses must be connected by the customer (see separate Assembly Instructions).

1. Connect the hose for the compressed air supply from compressed air circuit directly to the main air connection - **1.1 IN** on the rear of the control unit (female thread: 1/4” B.S.P.).

   The **compressed air must be free from oil and water.**

2. Connect the black hose for the fluidizing air to the corresponding output (**1.5**) on the rear of the control unit and to the pressure reducing valve (**9**) on the trolley.

3. Fit the grounding connection cable on the control unit with the grounding screw, and the 5 m long grounding cable with the clamping clip on the booth or on the hanger device.

4. Connect the gun cable with the 7 pole plug on the rear of the control unit on the socket - **2.2** (Gun).

   The **PG 1 Manual powder gun cannot be connected!**

5. Connect the hose for rinsing air on the rinsing air output - **1.4** and on the powder gun.

6. Plug the injector in, and connect the powder hose on the injector and on the powder gun.

7. Connect the red hose for conveying air to the corresponding output - **1.2** on the rear of the control unit and to the injector.

8. Connect the black hose for supplementary air to the corresponding output - **1.3** on the rear of the control unit and to the injector.

9. Fit one end of the venting hose onto the venting tube (**11**) of the cover, and place the other end in the opening of the booth.

10. **NOTICE**  
    Atmospheric pressure must be present in the powder hopper during operation!

   **NOTICE**  
   **NOTICE**  
   **NOTICE**

   **Mains connection**  
   **AuxGun**

   - **Input voltage:** 85 – 264 V
   - **Input power:** 47 – 440 Hz
   - **Degree of protection:** IP 54
   - **Output:** 65 VA
   - **Corresponding guns:** EasySelect

   **POWDER GUN CONTROL**  
   **TYPE EASYTRONIC**

   **Figure 1**
DESCRIPTION OF FUNCTION

The fluidized powder in the powder hopper is sucked into the injector by means of the conveying air (1 - red hose). The powder/air mixture reaches the powder gun through the powder hose (2). The powder is electrostatically charged at the nozzle of the gun. In addition, an electrostatic field is created between the gun nozzle and the grounded object. The charged, and sprayed powder adheres to the surface of the object.

The powder is fluidized by air forced through a porous plastic plate from below. The powder acquires, thereby, fluid-like characteristics. The conveying air, supplementary air, and rinsing air are set on the control unit, and the fluidizing air is set on the fluidizing unit on the trolley. The functioning of the injector is described in the EI1-V injector operating instructions.

The arrows always show the direction of flow

Figure 2
The operating panel of the EasyTronic control unit consists of 4 main areas: Diagnosis LEDs, Displays, “+/-” Keys, and Function keys.

1. The Diagnosis LEDs 1 – 8 serve to show the status of the equipment, and equipment faults. Detailed information is found in Chapter “Troubleshooting guide”.

2. There are two Displays with whose help the following values are displayed:
   - **Powder output** (Setting range 0 – 100 %) Powder output in % always refers to the max. possible output volume to the total air volume setting.
   - **Total air volume** (Setting range 1.6 – 6.0 Nm³/h)

3. The Keys “+” and “-” are for setting the powder output, and the total air volume used.
   - If the Key is pressed once, the value is increased or decreases, respectively, by one step. If the Key is pressed continuously, the setting change rapidly.

4. The Function keys have the following functions:
   - **Electrode rinsing air for flat jet nozzles**
   - **Electrode rinsing air for round jet nozzles**
     - When a Key is pressed once, the corresponding function is activated, and the corresponding LED illuminates.
     - If a Key with an illuminated LED is pressed for longer than 1 second, the function is deactivated.
     - ITW Gema recommends leaving the electrode rinsing air switched on, but can, however, remain switched off with application with very small amounts of powder.
   - **Application keys**: With these keys the electrostatic (High-voltage, and current) are automatically set so that the setting for the selected application is the optimum.
     - Settings for flat parts
     - Settings for complicated parts with depressions
     - Settings for coating parts already coated
     - The High-voltage and current can be deactivated when the appropriate key is pressed for more than 1 second when the LED illuminates

The EasyTronic control unit is switched on and off with a Push button. If the equipment is switched on, the yellow lamp is illuminated.

When the equipment is first switched on the preselected factory settings displayed:

- **60%**  4.0 Nm³/h
- Flat jet rinsing Complicated parts

After switching the equipment off (also when the equipment is disconnected from the Mains) the actual settings are retained.
PREPARATION FOR START UP

a) Filling the Powder hopper

1. Open the powder hopper filling cover.
2. Set the Airmover (if present) by turning the air valve
3. Fill with maximum 25 kg (50 l) powder or the powder must reach to a maximum of 5-10 cm below the handles of the powder hopper, otherwise the fluidized powder can escape from the cover.
4. Close the filling cover of the powder hopper again.

b) Switch the Booth on

Switch the powder coating booth on according to the operating instructions.

c) Function Check

1. Press the main switch on the control unit. The yellow control lamp in the switch illuminates.
   The equipment carries out the calibration automatically. An increase in sound can be heard inside the control unit. Both displays show 888. The equipment is ready for operation after not more than 20 seconds and switches to the factory settings.
2. Take the powder gun in the hand and point at a grounded object in the booth, distance approx. 20 cm.
3. Press the gun trigger.
   The LED No. 8 illuminates. The High-voltage is switched on and powder is conveyed.

If all tests are positive, the control unit, and the powder gun are ready for operation. If one of the functions is not operating as expected, check this in the "Troubleshooting Guide", on pages 11 and 12.
DAILY START UP

a) Powder fluidizing

The fluidizing of the powder is dependent on the type of powder, the humidity of the air and the ambient temperature. The fluidizing functions with the switching on of the control unit. Proceed as follows:

1. Set the Airmover (if fitted) by turning the air valve
2. Open the filling cover of the powder hopper
3. Slowly increase the fluidizing air on the fluidizing air pressure gauge (9)
   
   *The powder should only “boil” lightly, but evenly. If necessary, stir the powder with a stick.*
4. Fix the position of the pressure reducing valve by pressing the knob down
5. Close the filling cover again
6. Switch the Airmover off

b) Regulating the Powder output, and Powder cloud

The powder output is dependent on the powder, and the setting of the total air volume.

1. Switch on the control unit
2. Set the total air volume (For further information see the EI1-V Operating Instructions)
   
The total air volume is dependent on the powder hose length, the number of turns of the hose, the hose diameter, and the object to be coated.
   
The value set for the total air volume can be left as it is, as long as the same powder hose is used. If the hose length and/or the hose diameter are changed, then the total air volume must be reset.
3. Select the powder output volume according to the desired coating thickness.
   
The selection takes place with the aid of the Keys + and – either on the control unit or on the rear of the powder gun.
   
   To start, a standard setting of 60% is recommended. The total air volume is maintained constant automatically.
4. Check the fluidizing of the powder
5. Point the powder gun into the booth and press the powder gun trigger
6. Select the correct electrode rinsing
   
   When using flat jet nozzles:
   - Press the Key with the corresponding symbol [●]. The LED of the corresponding Key illuminates.

   When using round jet nozzles with air rinsed deflector plates:
   - Press the Key with the corresponding symbol [●]. The LED of the corresponding Key illuminates.
c) Powder coating

Make sure that all electrically conductive parts within 5 m of the coating booth are grounded!

1. Take the powder gun in hand and point it into the coating booth, however, do not point it at the object to be coated yet
2. Select the application settings
   Press the corresponding application key on the control unit. The LED of the corresponding Key illuminates.
3. Press the powder gun trigger
4. Coat the object(s)

7. Adjust the powder cloud to a test object
   When using flat jet nozzles:
   - Unscrew the threaded sleeve approximately 45°, so that the flat jet nozzle (or extension) can be turned slightly
   - Turn the flat jet nozzle to the desired axial position
   - Tighten the threaded sleeve again
   When using round jet nozzles with air rinsed deflector plates
   - Exchange the deflector plate (Ø 16, 24, and 32 mm supplied with the powder gun)

f) Powder hose rinsing

After longer stillstand periods the powder hose should be cleaned of powder. Proceed as follows:
1. Remove the powder hose from the hose connection on the injector
2. Point the powder gun into the booth
3. Blow the hoses through manually with a compressed air gun
4. Replace the powder hose on the hose connection of the injector again
COLOUR CHANGE

1. Empty the powder hopper and clean (see page 10)
2. Blow out the powder hose with compressed air
   Powder hoses are easily cleaned by taking a cube of foam packing material and blowing it through the hose with compressed air.
   Use our specially designed compressed air gun (Order No. 346 055)
   The foam cubes can be ordered in sheets of 100 pieces (Order No. 241 717)
3. Dismantle the powder gun and clean (see EasySelect-E Manual powder gun operating instructions)
4. Clean the injector (see El1-V Injector operating instructions)
5. Prepare the coating equipment for start-up with new powder (see “Filling the powder hopper” page 6)

MAINTENANCE SCHEDULE

Regular and conscientious maintenance increases the operating life of the unit and ensures a longer constant coating quality!

a) Daily Maintenance:

1a Clean the injector, see El1-V Injector operating instructions
2a Clean the powder gun, see EasySelect-E Manual powder gun operating instructions
3a Clean the Manual powder gun powder hose, see Colour change, Point 2

b) Weekly Maintenance:

1b Clean the powder hopper, injector and powder gun
   Only fill the powder hopper shortly before restarting operation
2b Check the grounding connection between the control unit and the coating booth, the object hanger device or the chain conveyor

c) When the Powder coating equipment is not used for a number of days:

1c Remove the main plug
2c Clean the coating equipment, see point 1b
3c Turn off the main compressed air supply
CLEANING

Cleaning the powder hopper

1. Disconnect the fluidizing air supply
2. Remove the injector
3. Remove the cover, blow out with compressed air and clean with a clean dry brush and cloth
4. Clean the suction tube, and injector
5. Empty the remaining powder into a container
6. Vacuum the hopper and, above all, the floor of the hopper
7. Clean the hopper with a cloth
8. Reassemble the powder hopper

⚠️ NOTICE
Refill the powder hopper shortly before reusing! Never clean the powder hopper with solvents or water!

Cleaning the EasySelect-E Manual powder gun

Frequent cleaning of the powder gun ensures the quality of the coating.

⚠️ CAUTION
Switched off the control unit before cleaning the powder gun. The compressed air used for cleaning must be free from oil and water.

Daily:

1. Blow off the exterior of the powder gun, and wiping clean etc.

Weekly:

2. Remove the powder hose from the connection
3. Remove the nozzle from the powder gun and clean
4. Remove the powder gun from the connection and blow through with compressed air in the direction of flow
5. Clean the powder gun tube with the spiral brush supplied
6. Blow the powder gun through with compressed air again
7. Clean the powder hose
8. Assemble the powder gun and reconnect
TROUBLESHOOTING GUIDE

The diagnosis LEDs 1-7 illuminate green when switched on, and LED 8 remains unilluminated. It illuminates red when the gun trigger is pulled.

SPARE PARTS LIST

Ordering Spare parts

When ordering Spare parts for powder coating equipment, please indicate the following specifications:

1. Type and serial number of your powder coating equipment
2. Order number, quantity, and description of each spare part

Example:

1. Type EASY 1-FE, Serial No.: XXXX XXXX
2. Order No.: 201 073, 5 pieces, Fine wire fuse

When ordering cable and hose material the length required must be given. The spare part numbers of yard/meter ware always begins with 1..... and are always marked with an * in the spare parts list.

Wear parts are always marked with a #.

All dimensions for plastic powder hoses are given as external diameter (o/d) and internal diameter (i/d):

e. g. ø 8 / 6 mm, 8 mm outside diameter / 6 mm inside diameter (i/d).
