About this instructions

General information

This operating manual contains all important information you will need to work with the OptiFlex 2 B Spray. It will safely guide you through the start-up process and give you references and tips for the optimal use of your new powder coating system.

Information about the functional mode of the individual system components should be referenced in the respective enclosed documents.

Keeping the manual

Please keep this manual ready for later use or if there should be any queries.

Safety symbols (pictograms)

The following contains a list of warnings with their meanings found in the Gema operating instructions. Apart from the regulations in the relevant operating instructions, the general safety precautions must also be followed.

⚠️ DANGER

Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION

Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury.
ATTENTION
Indicates a potentially harmful situation which, if not avoided, the equipment or something in its surrounding may be damaged.

ENVIRONMENT
Indicates a potentially harmful situation which, if not avoided, may have harmful consequences for the environment.

MANDATORY NOTE
Information which must be observed.

NOTE
Useful information, tips, etc.

Structure of Safety Notes
Every note consists of 4 elements:
– Signal word
– Nature and source of the danger
– Possible consequences of the danger
– Prevention of the danger

SIGNAL WORD
Nature and source of the hazard!
Possible consequences of the danger
► Prevention of the danger

Presentation of the contents

Figure references in the text
Figure references are used as cross references in the descriptive text.
Example:
"The high voltage (H) created in the gun cascade is guided through the center electrode."
Safety

Intended use

- This product is built to the latest specification and conforms to the recognized technical safety regulations and is designed for the normal application of powder coating.
- Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. If this product is to be used for other purposes or other substances outside of our guidelines then Gema Switzerland GmbH should be consulted.
- Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use. This product should only be used, maintained and started up by trained personnel, who are informed about and are familiar with the possible hazards involved.
- Start-up (i.e. the execution of intended operational tasks) is forbidden until it has been established that this product has been set up and wired according to the guidelines for machinery. The standard "Machine safety" must also be observed.
- Unauthorized modifications to the product exempt the manufacturer from any liability from resulting damage.
- The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.
- Furthermore, the country-specific safety regulations also must be observed.

Product-specific safety information

- This product is a constituent part of the equipment and is therefore integrated in the system's safety concept.
- If it is to be used in a manner outside the scope of the safety concept, then corresponding measures must be taken.
- The installation work to be done by the customer must be carried out according to local regulations.
– It must be ensured, that all components are earthed according to the local regulations before start-up.

For further security information, see the more detailed Gema safety regulations!

⚠️ WARNING

Working without operating instructions

Working without operating instructions or with individual pages from the operating instructions may result in damage to property and personal injury if relevant safety information is not observed.

► Before working with the device, organize the required documents and read the section "Safety regulations".
► Work should only be carried out in accordance with the instructions of the relevant documents.
► Always work with the complete original document.

⚠️ WARNING

These general safety regulations must be read and understood in all cases prior to start-up!

General information

This manual coating equipment is built to the latest specification and conforms to the recognized technical safety regulations and is designed for the normal application of powder coating.

Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. Gema Switzerland GmbH must be consulted prior to any use of this manual coating equipment for any purposes or substances other than those indicated in our guidelines.

Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use.

The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

Furthermore, the country-specific safety regulations also must be observed.

Additional safety and operation notices can be found on the accompanying CD or on the homepage www.gemapowdercoating.com.

General dangers

Start-up is forbidden until it has been established that the manual coating equipment has been set up and wired according to the EU guidelines for machinery.

Unauthorized modifications to the coating equipment exempt the manufacturer from any liability from resulting damages or accidents.

The operator must ensure that all users do have the appropriate training for powder spraying equipment and are aware of the possible sources of danger.

Any operating method, which will negatively influence the technical safe-
ty of the powder spraying equipment, is to be avoided.
For your own safety, only use accessories and attachments listed in the operating instructions. The use of other parts can lead to risk of injury. Only original Gema spare parts should be used!
Repairs must only be carried out by specialists or by authorized Gema service centers. Unauthorized conversions and modifications can lead to injuries and damage to the equipment and invalidate the Gema Switzerland GmbH guarantee.

Electrical danger

The connecting cables between the control unit and the spray gun must be installed in such a way, that they cannot be damaged during the operation. Please observe the local safety regulations!
The plug connections between the powder spraying equipment and the mains should only be removed when the power supply is switched off.
All maintenance activities must take place when the powder spraying equipment is switched off.
The powder coating equipment may not be switched on until the booth is in operation. If the booth stops, the powder coating device must switch off too.

Explosion hazard

The control units for the spray guns must be installed and used in zone 22. Spray guns are allowed in zone 21.
Only original Gema OEM parts are guaranteed to maintain the explosion protection rating. If damages occur by using spare parts from other manufacturers, the warranty or compensation claim is void!
Conditions leading to dangerous levels of dust concentration in the powder spraying booths or in the powder spraying areas must be avoided. There must be sufficient technical ventilation available, to prevent a dust concentration of more than 50% of the lower explosion limit (UEG = max. permissible powder/air concentration). If the UEG is not known, then a value of 10 g/m³ should be considered (see EN 50177).
All unauthorized conversions and modifications to the electrostatic spraying equipment are forbidden for safety reasons.
No safety devices should be dismantled or put out of operation.
Mandatory operational and workplace notices from the operating company must be written in a comprehensible manner in the language of equipment operators and posted in a suitable place.

Slip hazard

Powder lying on the floor around the powder spraying equipment is a potentially dangerous source of slipping. Booths may be entered only in the places suitable for it.

Static charges

Static charges can have the following consequences: Charges to people, electric shocks, sparking. Proper grounding must be in place to prevent objects from becoming charged.
**Grounding**

All electrically conductive parts found in the workplace of 5 meters around each booth opening, and particularly the objects to be coated, have to be grounded. The grounding resistance of each object must amount to maximally 1 MOhm. This resistance must be checked/tested regularly when starting work.

The condition of the work piece attachments, as well as the hangers, must guarantee that the work pieces remain grounded. The appropriate measuring devices must be kept ready in the workplace, in order to check the grounding.

The floor of the coating area must conduct electricity (normal concrete is generally conductive).

The supplied grounding cable (green/yellow) must be connected to the grounding screw of the electrostatic manual powder coating equipment. The grounding cable must have a good metallic connection with the coating booth, the recovery unit and the conveyor chain, respectively with the suspension arrangement of the objects.

**Fire and smoke prohibition**

Smoking and igniting fire are forbidden in the entire vicinity of the system! No work that could potentially produce sparks is allowed!

**The stay for persons with cardiac pacemakers is forbidden**

As a general rule for all powder spraying installations, persons with pacemakers should never enter high voltage areas or areas with electromagnetic fields. Persons with pacemakers should not enter areas with powder spraying installations!

**Photographing with flashlight is forbidden**

Photographing with flashlight can lead to unnecessary releases and/or disconnections by safety devices.

**Disconnect from mains before maintenance works take place**

Disconnect the plugs before the machines are opened for maintenance or repair.

The plug connections between the powder spraying equipment and the mains should only be removed when the power supply is switched off.
As far as it is necessary, the operating firm must ensure that the operating personnel wear protective clothing (e.g. facemasks). A dust mask corresponding to filter class FFP2 or N95 at minimum must be worn during any cleaning work. The operating personnel must wear electrically conductive, steel-toe footwear (e.g. leather soles). The operating personnel should hold the gun with bare hands. If gloves are worn, these must also conduct electricity.
Product description

Field of application

The OptiFlex 2 B Spray manual coating equipment (with powder box) is exclusively intended for electrostatic coating using organic powders (For more on this please also review chapter “Technical Data”).

Any other use is considered non-compliant. The manufacturer is not responsible for any incorrect use and the risks associated with such actions are assumed by the user alone!

For a better understanding of the interrelationships in powder coating, it is recommended that the operating instructions for all other components be read as well, so as to be familiar with their functions too!

Fig. 1

Utilization

This electrostatic manual coating equipment with the OptiSelect GM03 manual powder gun is ideally suited for manual coating of objects.
Versions

The manual coating equipment is available in different versions and covers a broad application range.

This manual unit is the right solution for coatings that require a constant powder output or high film builds. With a powder output of up to 300 g/min and an extremely high efficiency best coating results are achieved.

Reasonably foreseeable misuse

- Operation without the proper training
- Use with insufficient compressed air quality and grounding
- Use in connection with unauthorized coating devices or components
Design and function

</tr>
</tbody>
</table>

Air flow rates

The total air consists of conveying air and supplementary air, in relation to the selected powder quantity (in %). As a result the total air volume is maintained constant.

<table>
<thead>
<tr>
<th>OptiFlex 2 B Spray</th>
<th>Range</th>
<th>Factory setting</th>

Scope of delivery

**OptiFlex 2 B Spray**

- OptiStar CG11-P Control unit in a metal case with power supply cable
- OptiSpray AP01 Application Pump
- OptiSelect GM03 manual powder gun with gun cable, powder hose, rinsing air hose and standard nozzle set (For more on this, see the operating manual for the OptiSelect GM03 manual powder gun)
- Diffuser
- mobile trolley with a gun/hose support
- vibrating base and a fluidizing/suction unit
- Pneumatic hoses for conveying air (red), supplementary air (black), fluidizing air (black) and rinsing air (black)
- Operating manual
- Short description

Typical properties – Characteristics of the functions

**Processing the powder directly from the original powder manufacturer's container**

The manual coating equipment allows for powder to be processed directly out of the original powder manufacturer's container. A titled vibrating floor has been included to ensure that the powder container empties itself completely.

**Freely rotating head piece**

This manual coating equipment features a freely rotating and lockable head piece for more ergonomic operation and configuration. Der Kopfteil lässt sich problemlos frei drehen und arretieren.
Start-up

Preparation for start-up

Basic conditions

When starting up this manual coating unit, the following general conditions impacting the coating results must be taken into consideration:

– Manual coating equipment is set up properly
– Gun control unit correctly connected
– Gun correctly connected
– Corresponding power and compressed air supply available
– Powder preparation and powder quality

Set-up

This manual coating equipment should always be set up vertically on a flat surface.

ATTENTION

Surrounding temperature too high

► Install the equipment only in locations with an ambient temperature of between +15 and +40 °C, i.e. never next to heat sources (such as an enameling furnace) or electromagnetic sources (such as a control cabinet).
Assembly guide

This manual coating equipment must be set up in accordance with the setup and connecting instructions (included with delivery).

fig. 4: Manual coating equipment OptiFlex 2 B Spray
Connection instructions

The manual coating equipment must be connected in accordance with the setup and connection instructions (Please also review the operating instructions for the OptiStar CG11-P manual gun control unit).

fig. 5: Connecting guide – overview

1. Electrode rinsing air hose
2. Powder hose
3. Gun cable
4. Pinch valve air hose
5. Spraying air hose
6. Transport air hose
7. Control signal cable
8. Application pump
9. Fluidizing/suction unit
10. Compressed air hose
12. Fluidizing air hose
Use clamp to connect grounding cable to the cabin or the suspension arrangement. Check ground connections with Ohm meter and ensure 1 MOhm or less.

The compressed air must be free of oil and water!
Initial start-up

If a malfunction occurs, see the troubleshooting guide, as well as the gun control unit operating manual!

Fig. 6

The further start-up procedure for the OptiSpray AP01 Application pump is explicitly described in the OptiStar CG11-P Gun control unit operating instructions (chapter "Initial start-up" and "Daily start-up")!
Set head piece

1. 2. 3.

Setting the device type

If the control unit is delivered as an integral component of an OptiFlex apparatus, then the system parameter P00 will have been factory preconfigured to the value "5" for optimal use (Application pump). For more on this, please also see the operating instructions for the OptiStar CG11-P manual gun control unit!

- The gun control unit always starts up to the last configured settings.
Operation

WARNING

Holding the gun incorrectly

During the coating process, the gun can discharge along the body of the coater if not held using its intended handle, which has been grounded.

► Always hold gun only by the handle!
► Do not touch any other parts of the gun!

Coating

CAUTION

Large dust formation possible!

If the manual equipment is not being used for coating in conjunction with a sufficiently powerful suction unit, then the stirred-up dust from the coating powder can cause respiratory issues or cause a slippage/falling hazard.

► The manual equipment may only be operated in conjunction with a sufficiently powerful suction unit (such as Gema Classic Open booth).

1. Swivel aside the fluidizing/suction unit
2. Place the open powder container on the vibrating table

CAUTION

Hand injury!

When placing a container on the vibrating plate, fingers caught in the gap between the two plates can be crushed.

► The container may weight a max. of 30 kg.

3. Place the fluidizing/suction unit onto the powder
4. Set coating parameters
5. Press the application button for the appropriate preset mode:

<table>
<thead>
<tr>
<th>Options</th>
<th>Button</th>
</tr>
</thead>
<tbody>
<tr>
<td>flat parts</td>
<td>![Button Image]</td>
</tr>
<tr>
<td>complicated parts</td>
<td>![Button Image]</td>
</tr>
<tr>
<td>overcoat</td>
<td>![Button Image]</td>
</tr>
</tbody>
</table>

The arrow above the desired button lights up:
OR

6. Press program key
   – Select desired program (01-20)
   – Change coating parameters as required

Programs 01-20 are preset at the factory but can be modified at any time, after which they are automatically stored.

<table>
<thead>
<tr>
<th>Description</th>
<th>Presetting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Powder output</td>

</tr>
<tr>
<td>Fluidizing air</td>
<td>0.1 Nm³/h (for OptiFlex-B)</td>
</tr>
</tbody>
</table>

7. Setting the total air volume

A total air volume of 4 Nm³/h and a 50% powder share are recommended as the base values.

8. Adjust the powder output volume (e.g. according to the desired coating thickness)
To achieve maximum efficiency, we recommend avoiding an overly high powder volume where possible!

- The standard setting of 50% and a total air volume of 4 Nm³/h is recommended at the start. The total air volume is thereby kept constant automatically by the control unit.
- If values are entered that the equipment cannot implement, then the operator is informed of this by a blinking in the relevant display and a temporary error message.

9. Setting the electrode rinsing air

- Press the \texttt{SEL} key

The second display level will be shown:

\begin{itemize}
  \item \approx 0.1 \text{ Nm}^3/\text{h}
  \item \approx 0.5 \text{ Nm}^3/\text{h}
\end{itemize}

10. Setting the fluidization

- Press the \texttt{SEL} key

The second display level will be shown:

\begin{itemize}
  \item too much electrode rinsing air
\end{itemize}
Check fluidization of the powder in the powder container.

The powder fluidization depends on the powder type, the air humidity and the ambient temperature. Fluidizing and vibration start by switching on the control unit.

**CAUTION**

Large dust formation possible!

If the fluidization has been incorrectly adjusted, then the coating powder can create a dust cloud capable of causing respiratory problems.

► Adjust the fluidization correctly.

11. Point the gun into the booth (not at the object to be coated), press the gun trigger and visually check the powder output
12. Check whether everything is functioning correctly
13. Coating
14. Adjust the coating parameters as necessary
Setting the background illumination

1. Press the `sel` key
   The display switches to the following level:
   ![Display Image]

2. Select the desired brightness
Color change

General information

When a color change takes place, the individual components of the manual coating equipment must be cleaned carefully. All powder particles of the former color must be removed during this process!

The following describes an 'extreme' color change (light to dark).
11. Remove and clean the nozzle, purge gun using air

12.  

13.  

14.  

15.  

16. Remove and clean the nozzle, purge gun using air

17. Clean the dense phase pump (see the corresponding operating manual)

18.  

19.  

20.  

21.  

22.  

23.  

Decommissioning

1. Release gun trigger
2. Switch off the control unit

The adjustments for high voltage, powder output, electrode rinsing air and fluidizing remain stored.

If in disuse for several days

1. Separate from power mains
2. Clean coating equipment (see Chapter on "Cleaning and maintenance")
3. Turn off the compressed air main supply
Cleaning and maintenance

Regular, careful cleaning and maintenance extends the service life of the manual coating equipment and ensures long-lasting, uniform coating quality!

- The parts to be replaced during maintenance work are available as spare parts. These parts can be found in the corresponding spare parts list!

Daily maintenance

1. Clean the application pump (see therefore the application pump user manual)
2. Clean the powder gun (For more on this, please also review the user manual for the OptiSelect GM03 manual powder gun)
3. Clean the powder hose; Please also review the section "Color change"

Weekly maintenance

1. Clean fluidizing/suction unit, application pump and powder gun.
   - Place the fluidizing/suction unit back into the powder shortly before restarting operation
2. Check the control unit grounding connections to the coating booth, the suspension devices of the work pieces, or the conveyor chain

If in disuse for several days

1. Separate from power mains
2. Clean the coating equipment
3. Turn off the compressed air main supply

Powder hose rinsing

If longer downtimes take place, the powder hose has to be cleaned.

The procedure is described in the section "Color change".
Cleaning

**CAUTION**

Large dust formation possible!

If no dust mask or one of an insufficient filter class is worn when cleaning the Fresh powder system, then the dust that is stirred up from the coating powder can cause respiratory problems.

- The ventilation system must be turned on for all cleaning work.
- A dust mask corresponding to filter class FFP2 or N95 at minimum must be worn during any cleaning work.

**Cleaning the fluidizing/suction unit**

1. Remove the suction hose from the application pump
2. Remove the fluidizing/suction unit
3. Clean the fluidizing/suction unit with compressed air. Also blow off the suction hose with compressed air
4. Reinsert the fluidizing/suction unit
5. Reconnect the suction hose

**Cleaning the OptiSelect GM03 manual powder gun**

Frequent cleaning of the gun helps to guarantee the coating quality.

Before cleaning the powder gun, switch off the control unit. The compressed air used for cleaning must be free of oil and water!

**Daily:**

1. Blow off the outside of the gun and wipe, clean etc.
2. Clean the diffuser

**Weekly:**

3. Remove the powder hose from the connection
4. Remove the diffuser from the gun and clean it
5. Remove the spray nozzle from the gun and clean it
6. Blow out the gun from the connection in flow direction with compressed air
7. Clean the integrated gun tube with the provided gun brush
8. Blow through the gun with compressed air again
9. Clean the powder hose
10. Reassemble the gun and connect it

Please also review the user manual for the OptiSelect GM03 manual powder gun!
Maintenance and cleaning of the filter unit

The filter unit on the manual coating equipment measures and cleans the compressed air. This is where the equipment's main compressed air connection is located.

Replacing the filter element

Procedure:
1. Unscrew the filter glass on the filter unit
2. Remove the complete filter element

![fig. 7: Replacing the filter element]

1. Replace the filter element
2. Clean the filter glass on the inside and install it again
## Troubleshooting

### General information

Prior to any troubleshooting measures, always check whether the equipment parameters (P00) as configured in the control unit are correct (See operating instructions for the OptiStar CG11-P manual gun control unit, Chapter "Initial Start-up – Setting Equipment Type").

Spare parts list

Ordering spare parts

When ordering spare parts for powder coating equipment, please indicate the following specifications:

- Type and serial number of your powder coating equipment
- Order number, quantity and description of each spare part

Example:

- Type OptiFlex 2 B Spray,
  Serial number 1234 5678
- Order no. 203 386, 1 piece, Clamp – Ø 18/15 mm

When ordering cable or hose material, the required length must also be given. The spare part numbers of this yard/meter ware is always marked with an *.

The wearing parts are always marked with a #.

All dimensions of plastic hoses are specified with the external and internal diameter:

Example:

Ø 8/6 mm, 8 mm outside diameter (o/d) / 6 mm inside diameter (i/d)

ATTENTION

Use of non-original Gema spare parts

When using the spare parts from other manufacturers the explosion protection is no longer guaranteed. If any damage is caused by this use all guarantee claims become invalid!

▶ Only original Gema spare parts should be used!
