General safety regulations

This chapter sets out the fundamental safety regulations that must be followed by the user and third parties using OptiFlex 2 CF manual coating equipment.

These safety regulations must be read and understood in full before the OptiFlex 2 CF is put into operation.

Safety symbols (pictograms)

The following warnings with their meanings can be found in the Gema operating instructions. The general safety precautions must also be followed as well as the regulations in the operating instructions.

**DANGER!**
Danger due to electrically live or moving parts. Possible consequences: death or serious injury

**WARNING!**
Improper use of the equipment could damage the machine or cause it to malfunction. Possible consequences: minor injuries or damage to equipment

**INFORMATION!**
Useful tips and other information
The OptiFlex 2 CF manual coating equipment is state of the art equipment that conforms to the recognized technical safety regulations and is designed for normal powder coating applications.

Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. Gema Switzerland GmbH must be consulted before OptiFlex 2 CF manual coating equipment is used for any other purposes or substances beyond those indicated here.

Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use.

The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

Furthermore, the country-specific safety regulations also must be observed.

Additional safety and operation notices can be found on the accompanying CD or on the homepage www.gemapowdercoating.com.

Start-up is forbidden until it has been established that the OptiFlex 2 CF manual coating equipment has been set up and wired according to the EU guidelines for machinery.

Unauthorized modifications to the OptiFlex 2 CF Manual coating equipment exempt the manufacturer from any liability from resulting damages or accidents.

The operator must ensure that all users have received appropriate training for powder spraying equipment and are aware of the possible sources of danger.

Any operating method, which will negatively influence the technical safety of the powder spraying equipment, is to be avoided.
For your own safety, only use accessories and attachments listed in the operating instructions. The use of other parts can lead to risk of injury. Only original Gema spare parts should be used!

Repairs must only be carried out by specialists or by authorized Gema service centers. Unauthorized conversions and modifications can lead to injuries and damage to the equipment and invalidate the Gema Switzerland GmbH guarantee.

The connecting cables between the control unit and the spray gun must be installed so as to eliminate the possibility of damage during the operation. Please observe the local safety regulations!

The plug connections between the powder spraying equipment and the mains should only be removed when the power supply is switched off.

All maintenance activities must take place when the powder spraying equipment is switched off.

The powder coating equipment may not be switched on until the booth is in operation. If the booth stops, the powder coating device must switch off too.

The control units for the spray guns must be installed and used in zone 22. Spray guns are allowed in zone 21.

Only original Gema OEM parts are guaranteed to maintain the explosion protection rating. If damages occur related to the use of spare parts from other manufacturers, all relevant warranty or compensation claims are void!

Conditions leading to dangerous levels of dust concentration in the powder spraying booths or in the powder spraying areas must be avoided. There must be sufficient technical ventilation available, to prevent a dust concentration of greater than 50% of the lower explosion limit (UEG = max. permissible powder/air concentration). If the UEG is not known, then a value of 10 g/m³ should be considered (see EN 50177).

All unauthorized conversions and modifications to the electrostatic spraying equipment are forbidden for safety reasons.

The safety devices may not be dismantled or put out of operation.

Mandatory operational and workplace notices from the operating company must be written in a comprehensible manner in the language of equipment operators and posted in a suitable place.
Powder lying on the floor around the powder spraying equipment is a potentially dangerous source of slipping. Booths may be entered only in the places designed for this purpose.

**Static charges**

Static charges can have the following consequences: Charges to people, electric shocks, sparking. Proper grounding must be in place to prevent objects from becoming charged.

**Earthing**

All electrically conductive parts found within 5 meters around each booth opening, and in particularly the objects to be coated, must be grounded. The grounding resistance of each object must amount to maximally 1 MOhm. This resistance must be checked/tested regularly when starting work.

The condition of the work piece attachments, as well as the hangers, must guarantee that the work pieces remain grounded. The appropriate measuring devices must be kept ready in the workplace, in order to check the grounding.

The floor of the coating area must conduct electricity (normal concrete is generally conductive).

The supplied grounding cable (green/yellow) must be connected to the grounding screw of the electrostatic manual powder coating equipment. The grounding cable must have a good metallic connection with the coating booth, the recovery unit and the conveyor chain, respectively with the suspension arrangement of the objects.

Smoking and igniting fire are forbidden in the entire vicinity of the system! No work that could potentially produce sparks is allowed!
As a general rule for all powder spraying installations, persons with pacemakers should never enter high voltage areas or areas with electromagnetic fields. Persons with pacemakers should not enter areas with powder spraying installations!

Photographing with flashlight can lead to unnecessary releases and/or disconnections by safety devices.

Disconnect the plugs before the machines are opened for maintenance or repair.

The plug connections between the powder spraying equipment and the mains should only be removed when the power supply is switched off.

As far as it is necessary, the operating firm must ensure that the operating personnel wear protective clothing (e.g. facemasks).

A dust mask corresponding to filter class FFP2 at minimum must be worn during any cleaning work.

The operating personnel must wear electrically conductive, steel-toe footwear (e.g. leather soles).

The operating personnel should hold the gun with bare hands. If gloves are worn, these must also conduct electricity.

These general safety regulations must be read and understood in all cases prior to start-up!
Proper use

1. The OptiFlex 2 CF manual coating equipment is state of the art equipment that conforms to the recognized technical safety regulations and is designed for normal powder coating applications.

2. Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. Gema Switzerland GmbH must be consulted before OptiFlex 2 CF manual coating equipment is used for any other purposes or substances beyond those indicated here.

3. Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use. The OptiFlex 2 CF manual coating equipment should only be used, maintained and started up by trained personnel informed and familiar with the possible hazards involved.

4. Start-up (i.e. operation of its intended use) is not allowed until it has been established that the OptiFlex 2 CF manual coating equipment has been installed and wired according to the EU Machinery Directive (2006/42/EC). EN 60204-1 (machine safety) must also be observed.

5. Unauthorized modifications to the OptiFlex 2 CF manual coating equipment exempt the manufacturer from any liability from resulting damage.

6. The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

7. Furthermore, the country-specific safety regulations also must be observed.

Product-specific safety measures

- Installation work performed by the customer must be carried out according to local regulations.
- All components must be grounded according to the local regulations before start-up.

OptiFlex 2 C Manual coating equipment

The OptiFlex 2 CF manual coating equipment is a constituent part of the equipment and is therefore integrated in the system's safety concept.

If it is to be used in a manner outside the scope of the safety concept, then corresponding measures must be taken.

NOTE:
For further security information, see the more detailed Gema safety regulations!
About this manual

General information

This operating manual contains all important information required to work with the OptiFlex 2 CF manual coating equipment. It will safely guide you through the start-up process and give you references and tips for the optimal use of your new powder coating system.

Information about the functionality of the individual system components - booth, gun control unit, manual gun or powder injector - should be referenced to their enclosed corresponding documents.

DANGER:

Working without operating instructions

Working without operating instructions or with individual pages from the operating instructions may result in damage to property and personal injury if relevant safety information is not observed.

► Before working with the device, organize the required documents and read the section "Safety regulations".

► Work should only be carried out in accordance with the instructions of the relevant documents.

► Always work with the complete original document.
Product description

Field of application

The OptiFlex 2 CF (with application funnel) manual coating equipment is exclusively intended for electrostatic coating using organic powders (For more on this please also review chapter "Technical Data").

Any other use is considered non-compliant. The manufacturer is not responsible for any incorrect use and the risks associated with such actions are assumed by the user alone!

For a better understanding of the interrelationships in powder coating, it is recommended that the operating instructions for all other components be read as well, so as to be familiar with their functions too!

Utilization

The electrostatic OptiFlex 2 CF manual coating equipment with the OptiSelect GM03 manual powder gun is ideally suited for manual coating of objects.
Reasonably foreseeable misuse

- Operation without the proper training
- Use with insufficient compressed air quality and grounding
- Use in connection with unauthorized coating devices or components

Technical data

Connectable guns

<table>
<thead>
<tr>
<th>OptiFlex 2 CF</th>
<th>connectable</th>
</tr>
</thead>
<tbody>
<tr>
<td>OptiSelect GM03</td>
<td>yes</td>
</tr>
</tbody>
</table>

WARNING:
The OptiFlex 2 CF manual coating equipment can only be used with the specified gun type!

Air flow rates

The total air consists of conveying air and supplementary air, in relation to the selected powder quantity (in %). As a result the total air volume is maintained constant.

<table>
<thead>
<tr>
<th>OptiFlex 2 CF</th>
<th>Range</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrode rinsing air flow rate</td>
<td>0-3,0 Nm³/h</td>
<td>0,1 Nm³/h</td>
</tr>
<tr>
<td>Flow rate total air (at 5.5 bar)</td>
<td>1,8-6,5 Nm³/h</td>
<td></td>
</tr>
</tbody>
</table>

NOTE:
The total air consumption for the device is determined based on the 3 configured air values.
These values apply for an internal control pressure of 5.5 bar!

3 Application funnel
4 Base
10 Filter unit
11 Gun holder
14 Shelf

OptiSelect GM03 manual powder gun
All information about the OptiSelect GM03 manual powder gun can be found in the documentation for that equipment (enclosed with this manual)!

OptiStar CG13 Gun control unit
All information about the OptiStar CG13 Control unit will be found in the corresponding enclosed documentation!

OptiSelect Application funnel set
All information about the Application funnel set will be found in the corresponding enclosed documentation!
Scope of delivery

OptiFlex 2 CF

- OptiSelect GM03 manual powder gun with gun cable, powder hose, rinsing air hose and standard nozzle set (For more on this, see the operating manual for the OptiSelect GM03 manual powder gun)
- OptiStar CG13 Control unit in a metal case with power supply cable
- Application funnel complete 250 ml with pneumatic connection to the control unit
- Base with column and filter unit
- Pneumatic hoses for conveying air (red) and rinsing air (black)
- Operating manual
- Short instructions

Typical properties – Characteristics of the functions

Processing the powder from the application funnel

The OptiFlex 2 CF manual coating equipment processes powder from the application funnel.
Commissioning

Preparation for start-up

Basic conditions

When starting up the OptiFlex 2 CF manual coating unit, the following general conditions impacting the coating results must be taken into consideration:

- Manual coating equipment is set up properly
- Gun control unit correctly connected
- Gun correctly connected
- Corresponding power and compressed air supply available
- Powder preparation and powder quality

Set-up

The OptiFlex 2 CF manual coating equipment should always be set up vertically on a flat surface.

WARNING:
The manual coating equipment must not under any circumstances be set up near a heat source (such as an enameling furnace) or an electromagnetic source (such as a control cabinet).
Mounting instructions

The OptiFlex 2 CF manual coating equipment must be set up in accordance with the setup and connecting instructions (included with delivery).

Connection instructions

The OptiFlex 2 CF manual coating equipment must be connected in accordance with the setup and connection instructions (Please also review the operating instructions for the OptiStar CG13 manual gun control unit).
NOTE:
Use clamp to connect grounding cable to the cabin or the suspension arrangement. Check ground connections with Ohm meter and ensure 1 MOhm or less!

NOTE:
The compressed air must be free of oil and water!
Initial start-up

**NOTE:**
If a malfunction occurs, see the troubleshooting guide, as well as the gun control unit operating manual!

1. ![Image](image1)
   - ![Image](image2)
   - ![Image](image3)

2. ![Image](image4)
   - 5,5 bar
   - ![Image](image5)

3. ![Image](image6)
   - 110 V/230 V
   - ![Image](image7)

4. ![Image](image8)
   - on
   - ![Image](image9)

**NOTE:**
The remainder of the start-up procedure for the OptiSelect GM03 manual powder gun is explicitly described in the operating instructions for the OptiStar CG13 manual powder gun control unit (chapter “Initial start-up” and “Daily start-up”)!
Setting the device type

NOTE:
If the control unit is supplied as a component of an OptiFlex equipment, then the corresponding system parameter P00 is set correctly by the factory!

A wrong parameterization leads to various malfunctions!
► The system parameter P00 must be set to 0!
► For more on this, please also see the operating instructions for the OptiStar CG13 manual gun control unit!

NOTE:
The manual gun control unit always starts up to the last configured settings.
Coating

WARNING:
If the manual equipment is not being used for coating in conjunction with a sufficiently powerful suction unit, then the stirred-up dust from the coating powder can cause respiratory issues or cause a slippage/falling hazard.

► The manual equipment may only be operated in conjunction with a sufficiently powerful suction unit (such as Gema Classic Open booth).

1. Turn on the gun control unit with the ON key. The displays illuminate and the control unit is ready for operation.
2. Fill in the desired powder quantity in the application funnel.
3. Set coating parameters:
4. Press the application button for the appropriate preset mode:
   - flat parts
   - complicated parts
   - overcoat

   The arrow above the desired button lights up.

OR

5. Press program key
   a) Select desired program (01-20)

   b) Change coating parameters as required.

NOTE:
Programs 01-20 are preset at the factory but can be modified at any time, after which they are automatically stored.
6. Setting the total air volume

![Image of air volume setting](image1)

**NOTE:**
A total air volume of 4 Nm³/h and a 100% powder share are recommended as the base values.

7. Adjust the powder output volume (e.g. according to the desired coating thickness)

![Image of powder output setting](image2)
NOTE:
To achieve maximum efficiency, we recommend avoided an overly high powder volume where possible!

- The standard setting of 100% and a total air volume of 4 Nm³/h is recommended at the start. The total air volume is thereby kept constant automatically by the control unit.
- If values are entered that the equipment cannot implement, then the operator is informed of this by a blinking in the relevant display and a temporary error message!

8. Set powder output on the control knob:

9. Setting the electrode rinsing air

   a) Press the key
      The second display level will be shown

   b) too much electrode rinsing air

10. Point the gun into the booth (not at the object to be coated),
     press the gun trigger and visually check the powder output

11. Check whether everything is functioning correctly

12. Coating

13. Adjust the coating parameters as necessary
Setting the background illumination

1. Press key
   The display switches to the following level:

2. Select the desired brightness

Color change

General information

When a color change takes place, the automatic cleaning process is started from the gun by pressing the P key on the gun directly.

NOTE:
The rinsing function can be stopped as required using the P key.

All components that contain powder (Application funnel, gun and spray nozzle) are automatically and comprehensively cleaned with pulses of compressed air.

Powder particles of the former color are removed during this process.

Procedure:
1. Fully apply or empty the contents of the application funnel
2. Point the application funnel into the booth

WARNING:
If the manual application funnel is not being pointed into a sufficiently powerful suction unit, then the stirred-up dust from the coating powder can cause respiratory issues.

▶ The application funnel may only be cleaned in conjunction with a sufficiently powerful suction unit (such as Gema Classic Open booth).
3. Turn the control knob into position

4. Activate the rinsing function

- The LCD segments begin to move on the display
- Pulsating compressed air rinses and cleans the route for the powder to the application funnel

5. The application funnel can also be cleaned internally and externally with the help of a compressed air gun for additional assistance.

6. Turn the control knob into position

- Pulsating compressed air rinses and cleans the route for the powder through the gun to the spray nozzle

7. After completion of the PowerClean procedure, the controller switches back to coating mode.

8. In cases of radical change of color, the whole application funnel can be dismantled and cleaned using compressed air (see the operating instructions of the application funnel to learn more about this)

9. Dismantle and clean the powder gun (see therefore the user manual of the Manual powder gun)

10. Prepare the Application funnel with new powder for start-up
Shutdown

1. Release gun trigger
2. Switch off the control unit

NOTE:
The adjustments for high voltage, powder output volume and electrode rinsing air remain stored

If in disuse for several days

1. Separate from power mains
2. Clean coating equipment (see Chapter on "Cleaning and maintenance")
3. Turn off the compressed air main supply
Maintenance and cleaning

**NOTE:**
Regular and conscientious maintenance increases the service life of the OptiFlex 2 CF manual coating equipment and provides for a longer continuous coating quality!

- The parts, which are to be replaced during maintenance work, are available as spare parts. These parts will be found in the corresponding spare parts list!

---

**Daily maintenance**

1. Clean the application funnel (see therefore the Application funnel set user manual)
2. Clean the powder gun (For more on this, please also review the user manual for the OptiSelect GM03 manual powder gun)

---

**Weekly maintenance**

1. Clean the application funnel and powder gun.
2. Check the control unit grounding connections to the coating booth, the suspension devices of the work pieces, or the conveyor chain

---

**If in disuse for several days**

1. Separate from power mains
2. Clean the coating equipment
3. Clean the application funnel
4. Turn off the compressed air main supply
Cleaning

WARNING:
If no dust mask or one of an insufficient filter class is worn when cleaning the Fresh powder system, then the dust that is stirred up from the coating powder can cause respiratory problems.
► The ventilation system must be turned on for all cleaning work.
► A dust mask corresponding to filter class FFP2 at minimum must be worn during any cleaning work.

NOTE:
The compressed air used for cleaning must be free of oil and water!

Cleaning the Application funnel set
1. Empty any powder out of the application funnel
2. See the chapter on "Changing color" for information on how to proceed further

Cleaning the OptiSelect GM03 manual powder gun
Frequent cleaning of the gun helps to guarantee the coating quality.
Daily:
1. Blow off the outside of the gun and wipe, clean etc.
Weekly:
2. Remove the application funnel set from the connection
3. Remove the spray nozzle from the gun and clean it
4. Blow out the gun from the connection in flow direction with compressed air
5. Clean the integrated gun tube with the provided gun brush
6. Blow through the gun with compressed air again
7. Clean the powder hose
8. Reassemble the gun and connect it

NOTE:
Please also review the user manual for the OptiSelect GM03 manual powder gun!
Maintenance and cleaning of the filter unit

The filter unit on the OptiFlex 2 CF manual coating equipment measures and cleans the compressed air. This is where the equipment's main compressed air connection is located.

**Replacing the filter element**

**Procedure:**

1. Unscrew the filter glass on the filter unit
2. Remove the complete filter element
3. Replace the filter element
4. Clean the filter glass on the inside and install it again
## General information

**NOTE:**
Prior to any troubleshooting measures, always check whether the equipment parameters (P00) as configured in the control unit are correct (See operating instructions for the OptiStar CG13 manual gun control unit, Chapter "Initial Start-up – Setting Equipment Type")

Spare parts list

Ordering spare parts

When ordering spare parts for powder coating equipment, please indicate the following specifications:

- Type and serial number of your powder coating equipment
- Order number, quantity and description of each spare part

Example:

- **Type** OptiFlex 2 CF
  **Serial number** 1234 5678
- Order no. 203 386, 1 piece, Clamp - Ø 18/15 mm

When ordering cable or hose material, the required length must also be given. The spare part numbers of this bulk stock is always marked with an *.

Wearing parts are always marked with a #.

All dimensions of plastic hoses are specified with the external and internal diameter:

**Example:**

Ø 8/6 mm, 8 mm outside diameter (o/d) / 6 mm inside diameter (i/d)

---

**WARNING!**

The use of spare parts from other manufacturers will invalidate the Gema guarantee conditions!

- Only original Gema spare parts should be used, because the explosion protection will also be preserved that way.
