About these instructions

General information

This operating manual contains all important information which you require for the working with the OptiSelect Pro GM04. It will safely guide you through the start-up process and give you references and tips for the optimal use when working with your powder coating system.

Information about the functional mode of the individual system components should be referenced in the respective enclosed documents.

Keeping the Manual

Please keep this Manual ready for later use or if there should be any queries.

Safety symbols (pictograms)

The following warnings with their meanings can be found in the Gema instructions. The general safety precautions must also be followed as well as the regulations in the relevant instructions.

⚠️ DANGER

Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING

Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION

Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

⚠️ ATTENTION

Indicates a potentially harmful situation. If not avoided, the equipment or something in its surrounding may be damaged.
ENVIRONMENT
Indicates a potentially harmful situation which, if not avoided, may have harmful consequences for the environment.

MANDATORY NOTE
Information which must be observed.

NOTICE
Useful information, tips, etc.

Structure of Safety Notes
Every note consists of 4 elements:
- Signal word
- Nature and source of the danger
- Possible consequences of the danger
- Prevention of the danger

Presentation of the contents

Figure references in the text
Figure references are used as cross references in the descriptive text.

Example:
"The high voltage (H) created in the gun cascade is guided through the center electrode."
Safety

General information

This chapter provides the user and third parties who operate this product with all essential safety regulations, the adherence to which is imperative.

These safety regulations must be read and understood in their entirety before the product is put into operation.

The standards and guidelines applied during the development, manufacture and configuration are described in the EC declaration of conformity and in the manufacturer’s declaration.

⚠️ WARNING

Working without instructions

Working without instructions or with individual pages from the instructions may result in damage to property and personal injury if relevant safety information is not observed.

► Before working with the device, organize the required documents and read the section "Safety regulations".
► Work should only be carried out in accordance with the instructions of the relevant documents.
► Always work with the complete original document.

Basic safety instructions

– This product is built to the latest specification and conforms to the recognized technical safety regulations and is designed for the normal application of powder coating.

– Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. If this product is to be used for other purposes or other substances outside of our guidelines then Gema Switzerland GmbH should be consulted.

– Start-up (i.e. the execution of intended operational tasks) is forbidden until it has been established that this product has been set up and wired according to the guidelines for machinery. The standard "Machine safety" must also be observed.

– Unauthorized modifications to the product exempt the manufacturer from any liability from resulting damage.
– The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

– Furthermore, the country-specific safety regulations also must be observed.

**Product specific security regulations**

– This product is a constituent part of the equipment and is therefore integrated in the system's safety concept.

– If it is to be used in a manner outside the scope of the safety concept, then corresponding measures must be taken.

– The installation work to be done by the customer must be carried out according to local regulations.

– It must be ensured, that all components are earthed according to the local regulations before start-up.

> For further security information, see the more detailed Gema safety regulations!
Product description

Intended use

This gun is used for electrostatic coating of objects connectable to ground with organic powders in conjunction with the control units and accessories, as specified in the corresponding Type Examination Certificate.

Observed and the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use. This product should only be used, maintained and started up by trained personnel, who are informed about and are familiar with the possible hazards involved.

Any other use is considered non-compliant. The manufacturer is not responsible for any incorrect use and the risks associated with such actions are assumed by the user alone!
Reasonably foreseeable misuse

- Use with insufficient compressed air quality
- Input pressure too low

**Scope of delivery**

- manual gun with gun cable (6 m), negative polarity
- Powder hose (6 m)
- Rinsing air hose (6 m)
- Flat jet nozzle NF40, complete (incl. electrode holder)
- Flat jet nozzle NF20, complete (incl. electrode holder)
- Cable tie with Velcro closure
- Gun cleaning brush
- Spare parts kit
- Operating manual
Available accessories**

- SuperCorona ring
- Flat jet nozzles
- Round jet nozzles
- Gun extension 150 and 300 mm
- Gun cable extensions
- Application cup 150 and 500 ml
- Multi-spray adapter
- Rinsing module (with corresponding OptiStar control unit only)
- Various adapters for connection to earlier generations of control units
- Gloves, anti-static

**for more information, see spare parts list

PowerClean™ module – Option

Field of application

The PowerClean module can be used in combination with the OptiStar control unit.

The PowerClean module provides increased stability in application processes. It prevents the bridging phenomena that can lead to short circuiting when handling powders such as metallic powders.

In moist or tropical environments, any moisture is driven from the injector, powder hose and powder gun. The color change is also accelerated during non-extreme color switches.

![fig. 4]
SuperCorona ring

*Field of application*

The SuperCorona is an optional extension for the gun, allowing for a better surface quality when coating with the powder coating equipment. When coating wheel rims, drawers, radiators, lamps etc. the surface quality is exceptional, also in places with higher coating layer requirements. By coating with several powder types, an "orange peel" finish can be completely avoided. By coating with structure powder, the "picture frame effect" is hardly visible.

The performance of the gun with SuperCorona is convincing due to its very good charging and very high deposition rate as well as an improved penetration into Faraday cages. The distance between nozzle and workpiece can be reduced to 100 mm without influencing the surface finish.

Due to its modular structure, the gun can be fast and easily extended with the light SuperCorona (approx. 60 g). The gun remains repair-friendly and easy to maintain even after reconfiguration.

*SuperCorona assembly*

Before fitting the SuperCorona ring, make sure that the connection and the plug-in connector are free from grease and powder; otherwise the electric contact cannot be guaranteed.
Principle of operation

High voltage generation

The control unit supplies a high-frequency low voltage signal of approx. 10 V eff. This voltage is fed through the gun cable (1) to the high voltage cascade (2) in the gun shaft.

In the high voltage cascade (2), the low voltage is high-transformed in a first step (c). This primary high voltage is subsequently rectified and multiplied in the high voltage cascade in a second step (d), until the required high voltage is obtained at the end (approx. 110 kV). The high voltage is now fed to the electrode (e) within the spray nozzle.

Circuit

In addition to the modulated low voltage needed for high voltage generation, there are signal lines fed through the gun cable. The control signals are used for monitoring gun trigger status and gun remote control functions.

The gun is released by a touch-free switch (3), which is operated by a magnet (4) in the trigger (5). The gun control unit switches on the modulated low voltage, the powder transport and the rinsing air.

fig. 5

Powder flow and electrode rinsing air

The electrode rinsing air is used by vented spray nozzles and is connected with its designated connection on the rear side of the gun control unit (see the operating manual of the gun control unit). The functions of the spray nozzles are described in the corresponding section of this manual.
Flat jet nozzle with vented central electrode

The vented flat jet nozzle serves for the spraying and the charging of the powder. The powder is charged by the central electrode (E). The high voltage (H) created in the gun cascade is guided through the center electrode.

![Fig. 6](image)

In order to prevent powder from sintering on the electrode, compressed air is used during the spray process.

The electrode rinsing air (S) adjustment on the gun control unit is described in the corresponding operating manual.

Round jet nozzle with vented deflector and vented central electrode

The vented deflector is used, to give the powder stream emerging from the gun, a cloud formation. The powder is charged by the central electrode (E). The high voltage (H) created in the gun cascade is guided through the center electrode.

![Fig. 7](image)

Since powder can accumulate on the baffle plate, it must be rinsed with compressed air.

The electrode rinsing air (S) adjustment on the gun control unit is described in the corresponding operating manual.
Typical characteristics – properties of the functions

Remote control

Three possibilities are available:
1. Change the powder output + Activate/stop rinsing process (factory setting)
2. Program change + Activate/stop rinsing process
3. Change the powder output + Activate/stop the PowerBoost function

The respective option is set in the OptiStar control unit in accordance with system parameter P12.
   – See therefore the corresponding operating manual.

   – Adapt powder output (The powder output is correspondingly increased or reduced)
   – Program change (It is switching between programs P01-P20)

   – Activating/Deactivating the rinse mode: the entire powder line from the suction area to the gun is rinsed
   – Direct temporary activation of the PowerBoost function. Press again to return to the previous setting. (See therefore the corresponding OptiStar CG21/CG23-P operating manual)

Powder hose quick release connection

   – Quick and simple connection and disconnection from powder hose and application cup
   – Protective function through to grounded clip ring

Connection for SuperCorona Ring

   – Quick and simple connection to and disconnection from the SuperCorona ring
Assembly / Connection

Connecting the gun

The gun is delivered ready-to-use by the manufacturer. Just a few cables and hoses must be connected.

The compressed air must be free of oil and water!

The gun is connected as follows:

1. Connect electrode rinsing air hose and powder hose to gun
2. Lay out gun cable, electrode rinsing air hose and powder hose and bind using Velcro strips (included)
3. Connect the gun cable plug to the socket 2.3 on the rear side of the control unit
4. Connect electrode rinsing air hose to coupling 1.4
5. Connect powder hose to injector
fig. 8

5  PowerClean™ module (Option)
Start-up

Preparation for start-up

Basic conditions

When starting up the gun control unit, the following general conditions impacting the coating results must be taken into consideration:

– Gun correctly connected
– Gun control unit correctly connected
– Corresponding power and compressed air supply available
– Powder preparation and powder quality OK
Initial start-up

If a malfunction occurs, see the troubleshooting guide, as well as the gun control unit operating manual!

1. [Diagram of a hand holding a trigger]
2. [Diagram of a pressure gauge showing 5.5 bar]
3. [Diagram of a voltage symbol showing 110 V/230 V]
4. [Diagram of a control panel with the word "on"]
5. [Diagram of a gun with a trigger and a magazine]

fig. 9

The remainder of the start-up procedure for the gun is explicitly described in the operating instructions for the OptiStar CGxx manual powder gun control unit (chapter "Initial start-up" and "Daily start-up")!
Operation

WARNING

Holding the gun incorrectly

During the coating process, the gun can discharge along the body of the coater if not held using its intended handle, which has been grounded.

► Always hold gun only by the handle!
► Do not touch any other parts of the gun!

Setting powder output and powder cloud

The powder output depends on the selected powder output (in %), and the powder cloud on the selected total air volume.

As a factory default value, a powder rate of 50% and a total air volume of 4 Nm³/h are recommended.

– If values are entered that the gun control unit cannot implement, then the operator is informed of this by a blinking in the relevant display and a temporary error message!

Setting the total air volume

1. ▶

Adjust the total air volume on the gun control unit with the T3/T4 keys

– Adjust the total air volume according to the corresponding coating requests
Setting the powder output

1. Adjust the powder output volume (e.g. according to the desired coating thickness)
   - Factory default setting of 50% is recommended for initial operation. The total air volume is thereby kept constant automatically by the control unit.

   To achieve maximum efficiency, we recommend avoided an overly high powder volume where possible!

2. Check fluidization of the powder in the powder container
3. Point the gun into the booth, switch the gun on and visually check the powder output

Setting the electrode rinsing air

1. Press the key.
   The second display level will be shown.

2. Adjust the correct electrode rinsing air according to the applied nozzles (deflector plate, flat jet nozzle)
3. If in this display level is no operation for 3 seconds, the first display level is switched over independently.

---

**Rinsing mode**

The rinsing mode enables blowing off powder accumulations in the powder hose.

**Activating the rinsing function**

*Manual equipment without optional PowerClean module (system parameter P01=0)*

The rinsing mode can only be activated from standby mode (main menu display, no powder conveying).

---

**On manual coating equipment type F, the injector must be disconnected prior to cleaning procedure, on type B, the suction unit must be lifted, and on type S, the powder container must be empty.**

---

1. Detach the injector

2. OR
3. **START =**

</tbody>
</table>

3. **STOP =**

OR the cleaning mode is terminated automatically.

After completion of the PowerClean procedure, the controller switches back to coating mode.
Decommissioning / Storage

Decommissioning

1. End the coating procedure
2. Switch off the control unit

The adjustments for high voltage, powder output volume and electrode rinsing air remain stored.

If in disuse for several days

1. Separate from power mains
2. Clean guns, injectors and powder hoses (see therefore the corresponding user manuals)
3. Turn off the compressed air main supply

Storage conditions

Hazard notes
There is no danger to personnel or the environment if the unit is stored properly.

Type of storage
For safety reasons, the product should only be stored in a horizontal position

Storage duration
If the physical conditions are maintained, the unit can be stored indefinitely.

Space requirements
The space requirements correspond to the size of the product.
There are no special requirements concerning distance to neighboring equipment.
Physical requirements
Storage must be inside a dry building at a temperature between +5 and +50 °C. Do not expose to direct sunlight!

Maintenance during storage

Maintenance schedule
No maintenance schedule is necessary.

Maintenance works
During long-term storage, periodically perform a visual check.
Maintenance / Repairs

Interval

Gun maintenance
The gun is designed to require only a minimum amount of maintenance.
1. Clean the gun with dry cloth, see chapter "Maintenance"
2. Check connection points to powder house.
3. Replace the powder hoses, if necessary.

Cleaning

ATTENTION
Any unauthorized modifications and alterations to the product are not permitted for safety reasons and exclude the manufacturer's liability for any resulting damage!

Regular and conscientious cleaning and maintenance increase the service life of the product and ensure consistent high coating quality!
- The parts to be replaced during maintenance work are available as spare parts. These parts can be found in the appropriate spare parts list!
Gun cleaning

**ATTENTION**

**Impermissible solvents**

The following solvents may not be used to clean the gun:

- Ethylene chloride, acetone, ethyl acetate, methyl ethyl ketone, methylene chloride, premium gasoline, turpentine, tetrachloromethane, toluene, trichloroethylene, xylene!

**Only cleaning agents with a flash point of at least 5 Kelvin above the ambient temperature, or cleaning places with technical ventilation are allowed!**

**Before cleaning the powder gun, switch off the control unit. The compressed air used for cleaning must be free of oil and water!**

**Daily:**

1. Blow off the outside of the gun and wipe, clean etc.

**Weekly:**

2. Remove powder hose
3. Remove the spray nozzle from the gun and clean it with compressed air
4. Blow through the gun with compressed air, beginning from the connection in flow direction
5. Clean the integrated gun tube with the brush supplied if necessary
6. Blow through the gun with compressed air again
7. Clean the powder hose
8. Reassemble the gun and connect it

**Cleaning the spray nozzle**

**Daily or after every shift**

1. Clean the inside and outside of the spray nozzle with compressed air.

   Never immerse the parts in solvents!

2. Check the seating of the spray nozzles.

**ATTENTION**

**Threaded sleeve not tightened well**

If the spray nozzle is just fitted loosely, there is danger of a flash-over of the gun high voltage, which can damage the gun!

- Always tighten the threaded sleeve well!
**Weekly:**
1. Remove the spray nozzle and clean on the inside with compressed air. If sinterings should have formed, then they have to be removed!

**Monthly**
1. Check spray nozzle for wear
   The flat jet nozzle is to be replaced, if:
   - the spray pattern is no longer a regular oval
   - deeper grooves are in the nozzle slot, or even the wall thickness is no longer recognizable
   - the wedge of the electrode holder is worn

   Nozzles with deflectors:
   - if the wedge of the electrode holder is worn down, then the electrode holder is to be replaced

**Replacing parts**
Except for the replacement of possible defective parts, there are very few repairs to be made.

The replacement of the cascade and the repair of the powder gun cable connection is only permitted by an authorized Gema Service center!
   - Contact your Gema representative!

**Dismantling the gun**

**General information**

The gun should only be dismantled, if this is required because of a defect or pollution.
   - Dismantle the gun only so far, as the desired part is accessible!

⚠️ **WARNING**

**Touching the gun parts**
During work on the gun, the gun can discharge along the body of the coater if touching it.

► Before dismantling the gun, switch off the control unit and disconnect the gun plug!
Dismantling procedure

1.

2.

3.
Assembling the powder gun

The assembling is to be carried out in the reverse order to that shown above.

1.
# Fault clearance

Additional error descriptions are to be found also in the control unit operating instructions!

Disposal

Introduction

Requirements on personnel carrying out the work

The disposal of the product is to be carried out by the owner or operator.

When disposing of components that are not manufactured by Gema, the instructions in the respective manufacturer’s documentation must be observed.

Disposal regulations

The product must be disassembled and disposed of properly at the end of its service life.

► When disposing of the product, the applicable local and regional laws, directives and environmental regulations must be complied with!

Materials

The materials must be sorted according to material groups and taken to the appropriate collection points.
Spare parts list

Ordering spare parts

When ordering spare parts for powder coating equipment, please indicate the following specifications:

- Type and serial number of your powder coating equipment
- Order number, quantity and description of each spare part

Example:

- **Type** OptiGun GA03 automatic powder gun
  Serial number 1234 5678
- **Order no.** 203 386, 1 piece, Clamp – Ø 18/15 mm

When ordering cable or hose material, the required length must also be given. The spare part numbers of this bulk stock is always marked with an *.

Wearing parts are always marked with a #.

All dimensions of plastic hoses are specified with the external and internal diameter:

**Example:**

Ø 8/6 mm, 8 mm outside diameter (o/d) / 6 mm inside diameter (i/d)

**ATTENTION**

Use of non-original Gema spare parts

When using the spare parts from other manufacturers the explosion protection is no longer guaranteed. If any damage is caused by this use all guarantee claims become invalid!

► Only original Gema spare parts should be used!
OptiSelect Pro GM04 – spare parts list

Only parts were included in the spare parts list, which the user can replace himself without problems!
► If the powder gun cable is defective, it is to be completely sent in for repair!

<sup>1</sup> see NF27, NF20, NF21, NF24, NS04

<sup>2</sup> see NF25, NF26, NS09

### ATTENTION

**Connecting more than two extensions**

It is not permitted to connect more than two extensions together, in order to prevent the gun from being damaged by arising leverage force.

- The extensions (150 mm/300 mm) may be connected TO ONLY ONE ADDITIONAL extension (150 mm/300 mm), if necessary.
