About these instructions

General information

This operating manual contains all important information which you require for the working with the OptiSpray AP01.1. It will safely guide you through the start-up process and give you references and tips for the optimal use when working with your powder coating system.

Information about the functional mode of the individual system components should be referenced in the respective enclosed documents.

Keeping the Manual

Please keep this Manual ready for later use or if there should be any queries.

Safety symbols (pictograms)

The following warnings with their meanings can be found in the Gema instructions. The general safety precautions must also be followed as well as the regulations in the relevant instructions.

⚠️ DANGER
Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

⚠️ ATTENTION
Indicates a potentially harmful situation. If not avoided, the equipment or something in its surrounding may be damaged.
ENVIRONMENT
Indicates a potentially harmful situation which, if not avoided, may have harmful consequences for the environment.

MANDATORY NOTE
Information which must be observed.

NOTICE
Useful information, tips, etc.

Structure of Safety Notes
Every note consists of 4 elements:
– Signal word
– Nature and source of the danger
– Possible consequences of the danger
– Prevention of the danger

SIGNAL WORD
Nature and source of the hazard!
Possible consequences of the danger
▶ Prevention of the danger

Presentation of the contents

Figure references in the text
Figure references are used as cross references in the descriptive text.
Example:
"The high voltage (H) created in the gun cascade is guided through the center electrode."
Safety

Basic safety instructions

– This product is built to the latest specification and conforms to the recognized technical safety regulations and is designed for the normal application of powder coating.

– Any other use is considered non-compliant. The manufacturer shall not be liable for damage resulting from such use; the user bears sole responsibility for such actions. If this product is to be used for other purposes or other substances outside of our guidelines then Gema Switzerland GmbH should be consulted.

– Start-up (i.e. the execution of intended operational tasks) is forbidden until it has been established that this product has been set up and wired according to the guidelines for machinery. The standard “Machine safety” must also be observed.

– Unauthorized modifications to the product exempt the manufacturer from any liability from resulting damage.

– The relevant accident prevention regulations, as well as other generally recognized safety regulations, occupational health and structural regulations are to be observed.

– Furthermore, the country-specific safety regulations also must be observed.
Product specific security regulations

- This product is a constituent part of the equipment and is therefore integrated in the system's safety concept.
- If it is to be used in a manner outside the scope of the safety concept, then corresponding measures must be taken.
- The installation work to be done by the customer must be carried out according to local regulations.
- It must be ensured, that all components are earthed according to the local regulations before start-up.

For further security information, see the more detailed Gema safety regulations!

⚠️ WARNING

Working without instructions

Working without instructions or with individual pages from the instructions may result in damage to property and personal injury if relevant safety information is not observed.

► Before working with the device, organize the required documents and read the section “Safety regulations”.
► Work should only be carried out in accordance with the instructions of the relevant documents.
► Always work with the complete original document.
Product description

Intended use

The Application pump is intended for conveying coating powder (no enamel) to the powder gun.

The application pump operates only in combination with the OptiStar CG12-CP (automatic equipment) or the OptiStar CG11-P Control unit (manual equipment).

The application pump will only operate in combination with the OptiGun GA03-P automatic gun or with other Gema models with a suitable diffuser (spraying air adapter). Please contact Gema if you have any further queries.

fig. 1

Observance of the operating, service and maintenance instructions specified by the manufacturer is also part of conformity of use. This product should only be used, maintained and started up by trained personnel, who are informed about and are familiar with the possible hazards involved.

Any other use is considered non-compliant. The manufacturer is not responsible for any incorrect use and the risks associated with such actions are assumed by the user alone!
For a better understanding of the interrelationships in powder coating, it is recommended that the operating instructions for all other components be read as well, so as to be familiar with their functions too.

**Reasonably foreseeable misuse**
- Operation without the proper training
- Use with insufficient compressed air quality
- Input pressure too low
- Use in connection with unauthorized coating devices or components

**Technical Data**

**Electrical data**

</tr>
</thead>
<tbody>
<tr>
<td>Normal operation</td>
<td>&lt; 60 dB(A)</td>
</tr>
</tbody>
</table>

The sound pressure level was measured while the unit was in operation; measurements were taken at the most frequent operator positions and at a height of 1.7 m from the ground.

The specified value is applicable only for this product itself and does not take into account external noise sources or cleaning impulses.

The sound pressure level may vary, depending on the product configuration and space constraints.

<td>In manual equipment OptiFlex 2 Spray</td>
<td>Inside diameter 4.5 mm, hose length max. 1.5 m</td>
<td>Inside diameter 7 mm</td>
</tr>
</tbody>
</table>
Other hose diameters can also be used for certain applications.
- Only use other hose diameters with the explicit recommendation of Gema!
- On the transport side, a powder hose with conductive strip must be used (electrically conductive!)

Spraying air function / diffusers

The coating guns to be used must be equipped with the appropriate spraying air function or with an appropriate diffuser adapter.

![Diagram](image)

*Pin assignment*

Connection 2.5 Ext., 12-pins

A-H Control signal
J-M +24 VDC

Body – grounding PE

*Scope of delivery*

- Mains cable
- Operating manual
Typical properties - Characteristics of the functions

Main functions

– Conveying coating powder from or a fluidized container to the powder gun
– Processing signals from the superordinated OptiStar CG12-CP or CG11-P Control unit

Secondary functions

– Powder hose rinsing and cleaning of the filter elements

Conveying direction

The Application pump conveying direction is defined by the direction of arrow, that means, the suction side is on the bottom, the transport side on the top (see picture).

Powder hose rinsing

The powder hose rinsing enables the cleaning of the powder hoses and the filter elements in the Application pump. If color changes take place, rinsing must be done in conveying and in suction direction.

Cleaning programs

The OptiStar Gun control unit features three cleaning programs:

– Powder chamber emptying combined with hose cleaning in both directions
– Cleaning the hose to the gun only
– Cleaning the hose on the suction side only

(For details, see the operating instructions of the corresponding gun control unit)
ATTENTION

Large dust formation possible!
► The conveying hose and the powder gun must be pointed into the booth during the cleaning procedure!

The Ultra sonic sieve can be damaged during cleaning when being used with an OptiCenter.
► Only the original lid (without any sieve insert) must be assembled and closed on the OptiSpeeder!

The pump is to be cleaned as a component of the entire system.

Maintenance interval monitoring

This function is provided by the OptiStar CG12-CP or the CG11-P Control unit.
Assembly / Connection

Assembly guide

The application pump can be used in an OptiCenter OC03/OC05 Powder management center or as a part of the OptiFlex 2 Spray (B or F) manual equipment.

ATTENTION

Surrounding temperature too high

- Install the Application pump only in locations with an ambient temperature of between +15 and +40 °C, i.e. never next to heat sources (such as an enameling furnace) or electromagnetic sources (such as a control cabinet).
Connection instructions

The Gun control unit and the Application pump(s) are supplied ready for use by the manufacturer. Just a few cables and hoses must be connected.

**fig. 7: Connecting guide – overview**

1. Electrode rinsing air hose
2. Powder hose
3. Gun cable
4. Pinch valve air
5. Spraying air hose
6. Transport air hose
7. Control signal cable
8. Application pump no. 1
8.1 Application pump no. 2
9. Gun control
10. Compressed air hose
11. Hose coupling Ø 8/6 – Ø 6/4 mm
12. Powder hopper
Connect grounding cable to the booth or the suspension arrangement!
- Check ground connections with Ohm meter and ensure 1 MOhm or less.

The compressed air must be free of oil and water!

Close the unused connections with the provided dust protection caps!
Start-up

Preparation for start-up

Basic conditions
When starting up the Application pump, the following basic conditions, which have an influence on the powder transport, must be considered:

– Characteristic of hose layout
– Length and height difference of the suction distance: max. 30 cm
– Length of the conveying distance: 10-25 m
– Corresponding power and compressed air supply available
– Powder preparation and powder quality

Basic information
The adherence of the following principles leads to a successful start-up of the Application pump:

– The suction distance is to be kept as short as possible
– Basically, the powder transport with the Application pump works with every powder type, which can be fluidized. If the powder is for example humid or contaminated with other materials, then the conveying can be negatively influenced or does not work at all
– At the suction area, a homogeneous fluidization must be ensured, so that no air ducts (craters) can be formed
– The Application pump is not intended for use with enamel powders
Operation

During the initial commissioning of the device, the functional check is to be performed without powder!

Switching on and off the conveying procedure

The conveying procedure is switched on and off by the pump control (see the corresponding operating manual).

Switching on and off the rinsing procedure

The rinsing procedure is switched on and off by the pump control (see the corresponding operating manual).

For a better understanding of the interrelationships in powder coating, it is recommended to read completely the operating instructions of the control unit and the powder gun, so as to be familiar with their functions too.
**ATTENTION**

Any unauthorized modifications and alterations to the product are not permitted for safety reasons and exclude the manufacturer’s liability for any resulting damage!

Regular, careful cleaning and maintenance extends the service life of the product and ensures longlasting, uniform coating quality!

– The parts to be replaced during maintenance work are available as spare parts. For further information, see chapter "Spare parts list".

**General information**

The product is designed to require a minimum of maintenance.
Maintenance of the dense phase pump

Maintenance schedule

The following components or modules are subject to a maintenance plan:

– Pinch valves
– Filter elements

The service life of the filter elements and pinch valves depends on the service duration, the powder quality and the quality of the air supply.

Daily maintenance

Clean the Application pump with a dry cloth and check the connection points of the powder hoses. Replace the powder hoses, if necessary.

Rinse the Application pump by using the rinsing program. Therewith, the filter elements are cleaned and possible, unintended powder deposits in the Application pump and in the powder hoses are avoided.

Pinch valve diagnostic

The pinch valve diagnostic is to be carried out, in order to maintain the coating quality or after the error message H89 is displayed.

The prerequisites for the diagnostic:

– Exhaust at suction and conveyance side must be present and in operation
– Powder hopper must be empty
– Cleaning program completed

The pinch valve diagnostic is to start after the cleaning program has been completed!

– The detailed procedure is explicitly described in the CG12-CP/CG11-P Gun control unit operating instructions.

If the error message H87/H187 (suction pinch valve) or H88/H188 (conveying pinch valve) is displayed after the procedure has been completed, the corresponding pinch valve hoses must be replaced – see below.

Wearing parts

The wearing parts to be replaced during the OptiSpray AP01 Application pump maintenance are available separately (see spare parts list).
Cleaning

Cleaning the Application pump (color change)

For the preparation of a color change, the pump has to be rinsed.

The rinsing procedure can be started and stopped only externally via control unit or plant control.

– The Application pump must be cleaned at least once per shift!

Periodic checks

The periodic checks include examining all connecting cables and hoses. The corresponding parts should be replaced immediately if any damage to cables or hoses is discovered. All plugs must be properly tightened.
Repair work

In the event of malfunctions or faults, the product must be checked and repaired by an authorized Gema service workshop. The repairs must only be performed by an authorized specialist.

Improper tampering can result in serious danger for user and equipment.

Replacing the pinch valve hoses and filter elements

Before dismantling/changing the filter elements, it is necessary to clean the Application pump in both directions by using the rinsing program!

Required spare parts

AP01.1 Service set / Gema order no. 1015 435

1 Filter element  4 Braided sleeve
2 Pinch valve hose  5 O-ring
3 Fluid blocking ring
**Required Tools**

![Required Tools Image]

1. Dismantling tool (Order number: 1012 909)
2. Open-ended wrench 16 mm
3. Allen key size 4 mm
4. Allen key size 3 mm

**Pump disassembly**

![Pump Disassembly Images]

1. 
2. 
3. 
4. 
5. 
6.
Replacing the pinch valve hoses

ATTENTION
Incorrect inserted pinch valve hose causes malfunctions
► It is imperative to consider the position of the lens-shaped opening!
► Make sure that the positioning tabs are set correctly!

ATTENTION
Broken pinch valve hose may cause the clogging of the fluid blocking plate
► Clean or replace the corresponding fluid blocking plate!
Requiring the filter elements

**ATTENTION**

Use of non-permissible cleaning agents may cause damage to the plastic pinch valve body

- When cleaning the pinch valve bodies, do not use alcohol, acetone, benzol or other solvents!
- For cleaning, use benzine, light lye or acid or a cleaning agent!

1. ![Image](image1.png)
2. ![Image](image2.png)

**ATTENTION**

Incorrectly assembled parts may cause malfunctions or defects

- The assembly takes place in reverse order!
- The tightening torques are to be observed, when assembling!
- The process zone has to be pressed against a planar surface and assembled on it!

3. ![Image](image3.png)
4. ![Image](image4.png)
5. ![Image](image5.png)
6. ![Image](image6.png)

![Image](image7.png)

Operate the Application pump with powder at least 1/2 hour after replacing the filter elements.

- After the running-in of the filter elements a stable powder output value will be reached.

Requiring the solenoid valves for pinch valves control

Requirements on personnel carrying out the work

All work should be carried out only by authorized technical personnel.
Before dismantling/changing the solenoid valves, it is necessary to clean the Application pump in both directions by using the rinsing program!

**Required Tools**

![Required Tools Image](image)

1. Side cutter
2. Phillips screwdriver PH0
3. Hexagon screwdriver 4 mm
4. Hexagon screwdriver 3 mm
5. Hexagon screwdriver 2.5 mm

**Required spare parts**

Decommissioning / Storage

Shutdown

1. End the coating procedure
2. Switch off the control unit

The adjustments for high voltage, powder output volume and electrode rinsing air remain stored.

If in disuse for several days

1. Switch off the plant with the main switch
2. Clean the gun and the components for powder conveying (see therefore the corresponding user manuals)
3. Turn off the compressed air main supply

Storage conditions

Hazard notes
There is no danger to personnel or the environment if the unit is stored properly.

Type of storage
For safety reasons, the product should only be stored in a horizontal position

Storage duration
If the physical conditions are maintained, the unit can be stored indefinitely.

Space requirements
The space requirements correspond to the size of the product.
There are no special requirements concerning distance to neighboring equipment.
Physical requirements
Storage must be inside a dry building at a temperature between +5 and +50 °C. Do not expose to direct sunlight!

Maintenance during storage

Maintenance schedule
No maintenance schedule is necessary.

Maintenance works
During long-term storage, periodically perform a visual check.
Disposal

Introduction

Requirements on personnel carrying out the work
The disposal of the product is to be carried out by the owner or operator. When disposing of components that are not manufactured by Gema, the instructions in the respective manufacturer’s documentation must be observed.

Disposal regulations
![Warning]
The product must be disassembled and disposed of properly at the end of its service life.
- When disposing of the product, the applicable local and regional laws, directives and environmental regulations must be complied with!

Materials
The materials must be sorted according to material groups and taken to the appropriate collection points.

Disassembly of component groups

⚠️ WARNING
Live components
Risk of fatal injury from electric shock if touched
- Only trained, authorized staff may open the electrical compartment
- Observe the safety symbols

1. Disconnect the mains supply and supply cables.
2. Remove all product covers.
The product is now prepared for disassembly.
Spare parts list

Ordering spare parts

When ordering spare parts for powder coating equipment, please indicate the following specifications:

– Type and serial number of your powder coating equipment
– Order number, quantity and description of each spare part

Example:

– Type OptiGun GA03 automatic powder gun
  Serial number 1234 5678
– Order no. 203 386, 1 piece, Clamp – Ø 18/15 mm

When ordering cable or hose material, the required length must also be given. The spare part numbers of this bulk stock is always marked with an *.

Wearing parts are always marked with a #.

All dimensions of plastic hoses are specified with the external and internal diameter:

Example:

Ø 8/6 mm, 8 mm outside diameter (o/d) / 6 mm inside diameter (i/d)

ATTENTION

Use of non-original Gema spare parts

When using the spare parts from other manufacturers the explosion protection is no longer guaranteed. If any damage is caused by this use all guarantee claims become invalid!

► Only original Gema spare parts should be used!
